LIST OF TABLES

Table:                                    Page
1.  Tester reliability coefficient of test re-test scores  34
2.  Subject reliability coefficient of test re-test scores  35
3.  Relationship of selected anthropometric variables to spike jump performance of volleyball players  58
4.  Relationship of selected flexibility variables to spike jump performance of volleyball players  60
5.  Relationship of selected co-ordinative ability variables to spike jump performance of volleyball players  61
6.  Relationship of selected strength variables to spike jump performance of volleyball players  62
7.  Relationship of speed variable to spike jump performance of volleyball players  69
8.  Relationship of selected anthropometric variables to block jump from static position performance of volleyball players  70
9.  Relationship of selected flexibility variables to block jump static position performance of volleyball players  72
10. Relationship of selected co-ordinative ability variables to block jump static position performance of volleyball players  73
11. Relationship of selected strength variables to block jump static position performance of volleyball players  74
12. Relationship of speed variable to block jump static position performance of volleyball players  81
13. Relationship of selected anthropometric variables to block jump after side stepping performance of volleyball players  82
14. Relationship of selected flexibility variables to block jump after side step performance of volleyball players  84
15. Relationship of selected co-ordinative ability variables to block jump after side stepping performance of volleyball players  85
16. Relationship of selected strength variables to block jump after side stepping performance of volleyball players

17. Relationship of speed variable to block jump after side stepping performance of volleyball players

18. Relationship of selected anthropometric variables to block jump after cross stepping performance of volleyball players

19. Relationship of selected flexibility variables to block jump after cross stepping performance of volleyball players

20. Relationship of selected co-ordinative ability variables to block jump after cross step performance of volleyball players

21. Relationship of selected strength variables to block jump with cross stepping performance of volleyball players

22. Relationship of speed variable to block jump after cross stepping performance of volleyball players

23. Combined contribution of anthropometric variables to spike jump performance

24. Combined contribution of flexibility variables to spike jump performance

25. Combined contribution of coordinative variables to spike jump performance

26. Combined contribution of right shoulder flexion strength variables to spike jump performance

27. Combined contribution of left shoulder flexion strength variables to spike jump performance

28. Combined contribution of right shoulder extension strength variables to spike jump performance

29. Combined contribution of left shoulder extension strength variables to spike jump performance

30. Combined contribution of right hip flexion strength variables to spike jump performance

31. Combined contribution of left hip flexion strength variables to spike jump performance

32. Combined contribution of right hip extension strength variables to spike jump performance

33. Combined contribution of left hip extension strength variables to spike jump performance

x
34. Combined contribution of right knee flexion strength variables to spike jump performance
35. Combined contribution of left knee flexion strength variables to spike jump performance
36. Combined contribution of right knee extension strength variables to spike jump performance
37. Combined contribution of left knee extension strength variables to spike jump performance
38. Combined contribution of right ankle dorsiflexion strength variables to spike jump performance
39. Combined contribution of left ankle dorsiflexion strength variables to spike jump performance
40. Combined contribution of right ankle plantar flexion strength variables to spike jump performance
41. Combined contribution of left ankle plantar flexion strength variables to spike jump performance
42. Combined contribution of anthropometric variables to performance of block jump from static position
43. Combined contribution of flexibility variables to performance of block jump from static position
44. Combined contribution of coordinative variables to performance of block jump from static position
45. Combined contribution of right shoulder flexion strength variables to performance of block jump from static position
46. Combined contribution of left shoulder flexion strength variables to performance of block jump from static position
47. Combined contribution of right shoulder extension strength variables to performance of block jump from static position
48. Combined contribution of left shoulder extension strength variables to performance of block jump from static position
49. Combined contribution of right hip flexion strength variables to performance of block jump from static position
50. Combined contribution of left hip flexion strength variables to performance of block jump from static position
51. Combined contribution of right hip extension strength variables to performance of block jump from static position
52. Combined contribution of left hip extension strength variables to performance of block jump from static position
53. Combined contribution of right knee flexion strength variables to performance of block jump from static position
54. Combined contribution of left knee flexion strength variables to performance of block jump from static position
55. Combined contribution of right knee extension strength variables to performance of block jump from static position
56. Combined contribution of left knee extension strength variables to performance of block jump from static position
57. Combined contribution of right ankle dorsiflexion strength variables to performance of block jump from static position
58. Combined contribution of left ankle dorsiflexion strength variables to performance of block jump from static position
59. Combined contribution of right ankle plantar flexion strength variables to performance of block jump from static position
60. Combined contribution of left ankle plantar flexion strength variables to performance of block jump from static position
61. Combined contribution of anthropometric variables to performance of block jump after side stepping
62. Combined contribution of flexibility variables to performance of block jump after side stepping
63. Combined contribution of coordinative variables to performance of block jump after side stepping
64. Combined contribution of right shoulder flexion strength variables to performance of block jump after side stepping
65. Combined contribution of left shoulder flexion strength variables to performance of block jump after side stepping
66. Combined contribution of right shoulder extension strength variables to performance of block jump after side stepping

67. Combined contribution of left shoulder extension strength variables to performance of block jump after side stepping

68. Combined contribution of right hip flexion strength variables to performance of block jump after side stepping

69. Combined contribution of left hip flexion strength variables to performance of block jump after side stepping

70. Combined contribution of right hip extension strength variables to performance of block jump after side stepping

71. Combined contribution of left hip extension strength variables to performance of block jump after side stepping

72. Combined contribution of right knee flexion strength variables to performance of block jump after side stepping

73. Combined contribution of left knee flexion strength variables to performance of block jump after side stepping

74. Combined contribution of right knee extension strength variables to performance of block jump after side stepping

75. Combined contribution of left knee extension strength variables to performance of block jump after side stepping

76. Combined contribution of right ankle dorsiflexion strength variables to performance of block jump after side stepping

77. Combined contribution of left ankle dorsiflexion strength variables to performance of block jump after side stepping

78. Combined contribution of right ankle plantar flexion strength variables to performance of block jump after side stepping

79. Combined contribution of left ankle plantar flexion strength variables to performance of block jump after side stepping

xiii
80. Combined contribution of anthropometric variables to performance of block jump after cross stepping
81. Combined contribution of flexibility variables to performance of block jump after cross stepping
82. Combined contribution of coordinative variables to performance of block jump after cross stepping
83. Combined contribution of right shoulder flexion strength variables to performance of block jump after cross stepping
84. Combined contribution of left shoulder flexion strength variables to performance of block jump after cross stepping
85. Combined contribution of right shoulder extension strength variables to performance of block jump after cross stepping
86. Combined contribution of left shoulder extension strength variables to performance of block jump after cross stepping
87. Combined contribution of right hip flexion strength variables to performance of block jump after cross stepping
88. Combined contribution of left hip flexion strength variables to performance of block jump after cross stepping
89. Combined contribution of right hip extension strength variables to performance of block jump after cross stepping
90. Combined contribution of left hip extension strength variables to performance of block jump after cross stepping
91. Combined contribution of right knee flexion strength variables to performance of block jump after cross stepping
92. Combined contribution of left knee flexion strength variables to performance of block jump after cross stepping
93. Combined contribution of right knee extension strength variables to performance of block jump after cross stepping
94. Combined contribution of left knee extension strength/force variables to performance of block jump after cross stepping
95. Combined contribution of right ankle dorsiflexion strength variables to performance of block jump after cross stepping

96. Combined contribution of left ankle dorsiflexion strength variables to performance of block jump after cross stepping

97. Combined contribution of right ankle plantar flexion strength variables to performance of block jump after cross stepping

98. Combined contribution of left ankle plantar flexion strength variables to performance of block jump after cross stepping
## LIST OF ILLUSTRATIONS

Figure: | Page |
---|---|
1. Graphical representation of the relationship of anthropometric correlates to spike jump performance | 59 |
2. Graphical representation of the relationship of selected flexibility variables to spike jump performance of volleyball players | 60 |
3. Graphical representation of the relationship of selected coordinative ability variables to spike jump performance of volleyball players | 61 |
4. Graphical representation of the relationship of selected trunk strength variables to spike jump performance of volleyball players | 64 |
5. Graphical representation of the relationship of selected shoulder strength variables to spike jump performance of volleyball players | 65 |
6. Graphical representation of the relationship of selected hip strength variables to spike jump performance of volleyball players | 66 |
7. Graphical representation of the relationship of selected knee strength variables to spike jump performance of volleyball players | 67 |
8. Graphical representation of the relationship of selected ankle strength variables to spike jump performance of volleyball players | 68 |
9. Graphical representation of the relationship of selected anthropometric variables to block jump from static position performance of volleyball players | 71 |
10. Graphical representation of the relationship of selected flexibility variables to block jump static position performance of volleyball players | 72 |
11. Graphical representation of the relationship of selected coordinative ability variables to block jump static position performance of volleyball players | 73 |
12. Graphical representation of the relationship of selected trunk strength variables to block jump static position performance of volleyball players | 76 |
13. Graphical representation of the relationship of selected shoulder strength variables to block jump static position performance of volleyball players

14. Graphical representation of the relationship of selected hip strength variables to block jump static position performance of volleyball players

15. Graphical representation of the relationship of selected knee strength variables to block jump static position performance of volleyball players

16. Graphical representation of the relationship of selected ankle strength variables to block jump static position performance of volleyball players

17. Graphical representation of the relationship of selected anthropometric variables to block jump after side stepping performance of volleyball players

18. Graphical representation of the relationship of selected flexibility variables to block jump after side step performance of volleyball players

19. Graphical representation of the relationship of selected co-ordinative ability variables to block jump after side stepping performance of volleyball players

20. Graphical representation of the relationship of selected trunk strength variables to block jump after side stepping performance of volleyball players

21. Graphical representation of the relationship of selected shoulder strength variables to block jump after side stepping performance of volleyball players

22. Graphical representation of the relationship of selected hip strength variables to block jump after side stepping performance of volleyball players

23. Graphical representation of the relationship of selected knee strength variables to block jump after side stepping performance of volleyball players

24. Graphical representation of the relationship of selected ankle strength variables to block jump after side stepping performance of volleyball players

25. Graphical representation of the relationship of selected anthropometric variables to block jump after cross stepping performance of volleyball players
26. Graphical representation of the relationship of selected flexibility variables to block jump after cross stepping performance of volleyball players 96
27. Graphical representation of the relationship of selected coordinative ability variables to block jump after cross step performance of volleyball players 97
28. Graphical representation of the relationship of selected trunk strength variables to block jump with cross stepping performance of volleyball players 100
29. Graphical representation of the relationship of selected shoulder strength variables to block jump with cross stepping performance of volleyball players 101
30. Graphical representation of the relationship of selected hip strength variables to block jump with cross stepping performance of volleyball players 102
31. Graphical representation of the relationship of selected knee strength variables to block jump with cross stepping performance of volleyball players 103
32. Graphical representation of the relationship of selected ankle strength variables to block jump with cross stepping performance of volleyball players 104
