Acknowledgement

I really feel honoured to actually express my gratitude to many people who have helped me to reach this stage. At the same time, I am so short of words and expressions that can best describe my sense of appreciation for them in different respects.

‘Learning is an art’ is something that I really experienced with my Supervisor, Dr. V V N Kishore. He encouraged me to apply new methods without bothering for outcomes. His emphasis on the research process and endless reiterations induced confidence in me whenever I thought it is not possible any more. His kindness, and patience and liberal mindset allowed me to sustain my research even during difficult times that I faced in my personal and official life. His precise and logical thinking, analytical and clear communication skills immensely benefited me. I recall how much he supported me during the preparation of my first research paper. His frank comments and suggestions helped me a lot. At the end, I feel that I have not only produced an academic output in the form of Thesis or technical papers but have adopted the essence of a research process in my life. His unconditional support and teaching spirit is something that I would remember in the years to come. My deep regards and thanks to his support!

I wish to thank people – who mattered most during this journey; my family, friends, associates and critics.

Dr. P Balachandra and Dr. Ravindranath provided me an opportunity to work at the Centre for Management Studies and Centre for Sustainable Technologies at the Indian Institute of Science, Bangalore. I remember Deepak and Rahul for their assistance in modelling work. Dr. Balachandra has been a constant support throughout my research and kept my motivation on... even when he went as a Visiting Fellow to Harvard University, he would come online to advise me during critical days of finalisation of my thesis. He also spent his weekends to go through my preliminary drafts. I really owe him for his precious time, encouragement and sincere advice.

The deep and selfless support of Anshul and Chitra who helped in going through all the reiterations with numbers and softwares for mathematical modelling. Chitra particularly helped me in developing templates that helped me greatly. I wish to thank them profusely for being so caring and helpful.

Given the multidisciplinary nature of my research, I gained by the discussions and critical inputs of many experts. Dr. Ajay Mathur, Dr. Aparna Basu, Dr. PVSS Kumar, Dr. Sandhya Rao, on techniques of diffusion analysis. I wish to thank them all.
I am grateful to Dr. Bhaskar Natarajan for his perseverance in monitoring my work. He would not fail to call me from wherever he was to check on the progress and would help to set timelines which of course changed several hundred times!! His encouragement and companion during long hours of efforts which I felt endless is unforgettable. He would create space for my work and try to take away my distractions and try to put the train back on rails.

I would like to extend my thanks to Dr. Prateek Sharma, Dr. Surender Singh, Dr. Soan Ray for their inputs and suggestions during SRC meetings. Dr. Ramkishore particularly helped me with a programme to optimize diffusion parameter values. I am really grateful to all the SRC members for their cooperation and support. I have to specially thank Dr. Meeta Mehra for her inputs and guidance on quantification of diffusion parameters. I am thankful to Gp. Capt Rajiv Seth (Retd.) for his valuable support.

My thanks to Kamal, Pratibha and Sebastian for their role in ensuring my fulfilling of University rules. I also wish to mention thanks to my batchmate Hema Hasija for sharing her experience from time to time and checking on the formalities and obligations as a TERI student.

I sincerely wish to thank my organisations where I worked – UNDP for giving me sabbatical and subsequently, specially KfW - Mrs Karin Mulder, Mr. Matthias Boerner, Mr. Christian Haas and Mr. Oskar von Maltzan who supported me whenever I needed to take a long break to finish substantive work. I really owe my thanks to them. Some of my colleagues who supported during my long absence, specially Ramya who deserve my thanks. I want to acknowledge the support I received from my childhood friend Anil Arora from time to time.

I would like to thank Tanmay and specially Shilpi for extending timely help to go through the thesis with an architect lens! I will remain grateful to Shilpi for her support.

On a personal note, I wish to thank Late Dr. I J Raju who introduced me to the world of renewable energy and Dr. Veena Joshi who gave the first assignment to study the diffusion process of a few energy based products and services in the development sector. Somewhere, they led me to actually pursuing a career in the area renewable energy and environment.

Finally, I wish to thank my family members (my parents and in laws) who even after a series of tragic events supported me relentlessly. I am indebted to constant nagging and love of my daughter, Sambhavi to move on and finish it. Anil, my husband, for bearing the highs and the lows of my mood and for his love and professional support. My mother, Smt. Manorama Rao did everything to sustain my interests. I dedicate this thesis to my late father Shri R Kuppu Rao, who passed away only two years back - just before the day of acceptance of my first publication of technical paper... I really miss him... but feel his blessings all the time!
