## List of Tables

| Table 1 | Nutritional quality of different legumes used in the present study |
| Table 2 | Current information on available rhizobial species |
| Table 3 | Growth promoting substances produced by plant growth promoting rhizobacteria |
| Table 4 | Examples of plant growth-promoting substances synthesized by symbiotic nitrogen fixers |
| Table 5 | Organic acid production and P solubilization by PS bacteria |
| Table 6 | Some examples of siderophores produced by various bacteria and fungi |
| Table 7 | Plant responses to inoculation with PGPR |
| Table 8 | Examples of sole and composite inoculation effects of phosphate solubilizing bacteria on biological and chemical characteristics of different plants |
| Table 9 | Culture medium and growth conditions used for isolation and enumeration of microbial populations |
| Table 10 | List of antibiotics used for sensitivity test |
| Table 11 | Rates of urea and DAP for legumes |
| Table 12 | Experimental design for pot and field trials |
| Table 13 | Schemes followed for removal of plant organs at various stages |
| Table 14 | Microbial diversity in different soil samples collected from experimental fields of Faculty of Agricultural Sciences |
| Table 15 | Population of P-solubilizing and asymbiotic N-fixers in different soil samples collected from experimental fields of Faculty of Agricultural Sciences |
| Table 16 | Morphological and biochemical characteristics of N-fixers |
| Table 17 | Morphological and biochemical characteristics of P-solubilizers |
| Table 18 | Plant growth promoting (PGP) and antifungal activity based typing of *Mesorhizobium* strains (N=15) isolated from chickpea nodules |
| Table 19 | Plant growth promoting (PGP) and antifungal activity based typing of *Rhizobium* strains (N=15) isolated from pea nodules |
| Table 20 | Plant growth promoting (PGP) and antifungal activity based typing of *Bradyrhizobium* strains (N=10) isolated from greengram nodules |
| Table 21 | Plant growth promoting (PGP) and antifungal activity based typing of *Rhizobium* strains (N=10) isolated from lentil nodules |
| Table 22 | Plant growth promoting (PGP) and antifungal activity based typing of *Azotobacter* strains (N=20) isolated from rhizospheric soil |
| Table 23 | Plant growth promoting (PGP) and antifungal activity based typing of phosphate solubilizers (N=30) isolated from rhizospheric soils |
| Table 24 | Quantitative assay of plant growth promoting (PGP) activity of *Mesorhizobium* strains (N=15) isolated from chickpea nodules |
| Table 25 | Quantitative assay of plant growth promoting (PGP) activity of *Rhizobium* strains (N=15) isolated from pea nodules |
| Table 26 | Quantitative assay of plant growth promoting (PGP) activity of *Bradyrhizobium* strains (N=10) isolated from greengram nodules |
| Table 27 | Quantitative assay of plant growth promoting (PGP) activity of *Rhizobium* strains (N=10) isolated from lentil nodules |
| Table 28 | Quantitative assay of plant growth promoting (PGP) activity of *Azotobacter* strains (N=20) isolated from various rhizospheric soil |
Table 29  Quantitative assay of plant growth promoting (PGP) activity of P-solubilizers (N=8) isolated from mentha rhizospheric soil
Table 30  Quantitative assay of plant growth promoting (PGP) activity of P-solubilizers (N=10) isolated from chilli rhizospheric soil
Table 31  Quantitative assay of plant growth promoting (PGP) activity of P-solubilizers (N=7) isolated from cabbage rhizospheric soil
Table 32  Quantitative assay of plant growth promoting (PGP) activity of P-solubilizers (N=5) isolated from mustard rhizospheric soil
Table 33  Antifungal activity of rhizobia and Azotobacter
Table 34  Antifungal activity of isolated P-solubilizers
Table 35  Antibiotic resistance/ sensitivity profile of most promising PGPR strain
Table 36  Molecular identification of bacterial strains by 16S rRNA gene sequencing
Table 37  Most promising bacterial strains showing greatest plant growth promoting activity
Table 38  Single and coinoculation effects of ACC deaminase producing P. putida strain PSE3 and M. ciceri strain RG5 on growth of chickpea plant
Table 39  Single and coinoculation effects of ACC deaminase producing P. putida strain PSE3 and M. ciceri strain RG5 on dry biomass of plant organs for chickpea plant
Table 40  Single and coinoculation effects of ACC deaminase producing P. putida strain PSE3 and M. ciceri strain RG5 on photosynthetic and symbiotic attributes of chickpea plant
Table 41  Single and coinoculation effects of ACC deaminase producing P. putida strain PSE3 and M. ciceri strain RG5 on nutrient uptake, seed yield and seed quality of chickpea plant
Table 42  Single and coinoculation effects of ACC deaminase producing B. pumilus strain ES3 and M. ciceri strain RG5 on growth of chickpea plant
Table 43  Single and coinoculation effects of ACC deaminase producing B. pumilus strain ES3 and M. ciceri strain RG5 on dry biomass of plant organs for chickpea plant
Table 44  Single and coinoculation effects of ACC deaminase producing B. pumilus strain ES3 and M. ciceri strain RG5 on photosynthetic and symbiotic attributes of chickpea plant
Table 45  Single and coinoculation effects of ACC deaminase producing B. pumilus strain ES3 and M. ciceri strain RG5 on nutrient uptake, seed yield and seed quality of chickpea plant
Table 46  Single and coinoculation effects of phosphate solubilizing Azotobacter strain AZ19 and ACC deaminase producing M. ciceri strain RG5 on growth of chickpea plant
Table 47  Single and coinoculation effects of phosphate solubilizing Azotobacter strain AZ19 and ACC deaminase producing M. ciceri strain RG5 on dry biomass of plant organs for chickpea plant
Table 48  Single and coinoculation effects of phosphate solubilizing Azotobacter strain AZ19 and ACC deaminase producing M. ciceri strain RG5 on photosynthetic and symbiotic attributes of chickpea plant
| Table 49 | Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *M. ciceri* strain RG5 on nutrient uptake, seed yield and seed quality of chickpea plant |
| Table 50 | Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *R. leguminosarum* strain RP2 on growth of pea plant |
| Table 51 | Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *R. leguminosarum* strain RP2 on dry biomass of plant organs for pea plant |
| Table 52 | Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *R. leguminosarum* strain RP2 on photosynthetic and symbiotic attributes of pea plant |
| Table 53 | Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *R. leguminosarum* strain RP2 on nutrient uptake, seed yield and seed quality of pea plant |
| Table 54 | Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *R. leguminosarum* strain RP2 on growth of pea plant |
| Table 55 | Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *R. leguminosarum* strain RP2 on dry biomass of plant organs for pea plant |
| Table 56 | Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *R. leguminosarum* strain RP2 on photosynthetic and symbiotic attributes of pea plant |
| Table 57 | Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *R. leguminosarum* strain RP2 on nutrient uptake, seed yield and seed quality of pea plant |
| Table 58 | Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *R. leguminosarum* strain RP2 on growth of pea plant |
| Table 59 | Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *R. leguminosarum* strain RP2 on dry biomass of plant organs for pea plant |
| Table 60 | Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *R. leguminosarum* strain RP2 on photosynthetic and symbiotic attributes of pea plant |
| Table 61 | Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *R. leguminosarum* strain RP2 on nutrient uptake, seed yield and seed quality of pea plant |
| Table 62 | Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *Bradyrhizobium* strain RB6 on growth of greengram plant |
| Table 63 | Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *Bradyrhizobium* strain RB6 on dry biomass of plant organs for greengram plant |
| Table 64 | Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *Bradyrhizobium* strain RB6 on photosynthetic and symbiotic attributes of greengram plant |
| Table 65 | Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *Bradyrhizobium* strain RB6 on nutrient uptake,
Table 66 Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *Bradyrhizobium* strain RB6 on growth of greengram plant

Table 67 Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *Bradyrhizobium* strain RB6 on dry biomass of plant organs for greengram plant

Table 68 Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *Bradyrhizobium* strain RB6 on photosynthetic and symbiotic attributes of greengram plant

Table 69 Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *Bradyrhizobium* strain RB6 on nutrient uptake, seed yield and seed quality of greengram plant

Table 70 Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *Bradyrhizobium* strain RB6 on growth of greengram plant

Table 71 Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *Bradyrhizobium* strain RB6 on dry biomass of plant organs for greengram plant

Table 72 Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *Bradyrhizobium* strain RB6 on photosynthetic and symbiotic attributes of greengram plant

Table 73 Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *Bradyrhizobium* strain RB6 on nutrient uptake, seed yield and seed quality of greengram plant

Table 74 Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *Rhizobium* strain RV9 on growth of lentil plant

Table 75 Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *Rhizobium* strain RV9 on dry biomass of plant organs for lentil plant

Table 76 Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *Rhizobium* strain RV9 on photosynthetic and symbiotic attributes lentil plant

Table 77 Single and coinoculation effects of ACC deaminase producing *P. putida* strain PSE3 and *Rhizobium* strain RV9 on nutrient uptake, seed yield and seed quality of lentil plant

Table 78 Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *Rhizobium* strain RV9 on growth of lentil plant

Table 79 Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *Rhizobium* strain RV9 on dry biomass of plant organs for lentil plant

Table 80 Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *Rhizobium* strain RV9 on photosynthetic and symbiotic attributes of lentil plant

Table 81 Single and coinoculation effects of ACC deaminase producing *B. pumilus* strain ES3 and *Rhizobium* strain RV9 on nutrient uptake, seed yield and seed quality of lentil plant

Table 82 Single and coinoculation effects of phosphate solubilizing *Azotobacter* strain AZ19 and ACC deaminase producing *Rhizobium* strain RV9 on...
growth of lentil plant
Single and coinoculation effects of phosphate solubilizing Azotobacter strain AZ19 and ACC deaminase producing Rhizobium strain RV9 on dry biomass of plant organs for lentil plant

Table 83
Single and coinoculation effects of phosphate solubilizing Azotobacter strain AZ19 and ACC deaminase producing Rhizobium strain RV9 on photosynthetic and symbiotic attributes lentil of plant

Table 84
Single and coinoculation effects of phosphate solubilizing Azotobacter strain AZ19 and ACC deaminase producing Rhizobium strain RV9 on nutrient uptake, seed yield and seed quality of lentil plant
