After writing this thesis, I felt that I could easily write another chapter thanking all those who made it possible………………

I would like to express my deep gratitude to my supervisor, Dr Malini Balakrishnan who takes great efforts in understanding a student’s personality and tailoring her approach accordingly. It was not easy to start this study from scratch and I really thank her for the guidance, unstinted support, encouragement and the freedom she gave me to do things in my own order. Her trust in me had always inspired me to work hard. Thank you! Ma’am for the kindness with which you always treated me, for being available at anytime to answer billions of questions and resolve the doubts I always had and for patiently correcting the numerous drafts of research papers and thesis. Thank you! for the lessons you gave me on the importance of “details” for the success of a scientific project. I can now say that my apprentice pursuit into the world of science would not have been the same without your approach to research, which made me take the decision to embrace this amazing field as my career.

I sincerely express my gratitude to Prof. Willy Verstraete (Laboratory of Microbial Ecology and Technology (LabMET), Faculty of Bioscience Engineering, Gent University, Belgium). It was indeed a distinct privilege for me to work with him. I was immensely benefited by his vast knowledge, perceptiveness and enthusiasm for research.

I extend my sincere thanks to Dr Y.P. Abbi (Head of the department, Centre for Energy and Environment, TERI University) and my SRC members Dr V.V.N. Kishore, Dr Vidya S. Batra, and Dr Suneel Pandey for the critical assessment of my work and their valuable suggestions. I express my warmest thanks to Gp. Capt (Rtd) Rajiv Seth, Registrar, TERI University for his great help and cooperation.

I would like to sincerely thank all the people in lab and my research group who played an instrumental role in the completion of this study. I deeply acknowledge Mr Ravi Karan Singh, Mr Bhagwat Singh Bisht, Mr Dilip Sharma and Ms Ruchi Gupta for their help. Thank you, Ravi for taking care of the reactors whenever was I not around. I would also like to thank Mr Prahlad Tewari for his help in reactor fabrication, providing precise information related to Indian distilleries and also for his encouraging words. Special thanks are due to my friends Snigdha Sushil and Pooja Vashishit for providing a pleasant working environment in the lab. I wish to thank Ms K.V. Rajeshwari, Mr Dinesh Pant and Ms
Kusum Lata Jain for their timely help and the words of encouragement. Administrative assistance provided by Mr Rajeev Pillai is deeply acknowledged. I would also like to mention the students who did their dissertation projects with me Ajay, Anamika, Sanjeet, Indumathi and Mayank for their help in laboratory.

I wish to express my warm and sincere thanks to all LabMET (Gent University, Belgium) members for their kindness, love and support during my stay in Gent. Thanks are due to Peter Aelterman for his help in setting up in electrolytic treatment experiments and answering my questions related to electrochemistry. I would like to express my deep gratitude to Dr Tom Van de Wiele who always had a few words (but very valuable) to support and encourage me to continue working (when I sometimes felt lost). The thesis students Patrick Van Goethem and Jan Verachtert deserve a special mention for the help they extended in laboratory. I also extend my thanks to Dr Hans Saveyn and Prof. Paul Van der Meeren (Particle and Interfacial Technology Group, Faculty of Bioscience Engineering, Ghent University) for allowing me to conduct some experiments in their laboratory.

I gratefully acknowledge Prof. A.K. Ghosh, Head of the Center for Polymer Sciences and Engineering, Indian Institute of Technology, New Delhi and Dr R.R.N. Sailaja Bhattacharya (TERI, Bangalore) for the help in conducting FTIR analysis. I express my sincere thanks to Mr A.K. Srivastava and Mr I.K. Tewari (Simbhaoli Sugars Ltd., Uttar Pradesh, India) for allowing me to collect distillery effluent, bagasse and flyash samples from the industry premises. I am deeply indebted to my teacher Dr R.K. Srivastava (Department of Environmental Sciences, G.B. Pant University of Agriculture and Technology, Pantnagar) who taught me the fundamentals of this field.

I am grateful to all personnel (TERI) at Publication Unit, especially Mr R.K. Joshi, Centre for Information Technology (CIT), library, purchase section, dispatch and photocopying section and electrical division for their services and help they provided. Thanks are due to Mr Kamal Sharma and Ms Pratibha Shukla for taking care of the administrative obligations with TERI University.

I acknowledge the financial support provided by University Grants Commission (UGC), New Delhi, in the form of junior and senior research fellowship. Also the scholarship grant from the Flemish Government, Department of Higher Education and Scientific Research (Vlaamse Gemeenschap), Belgium for carrying out a part of this research in Gent University, Belgium is gratefully acknowledged.
On a personal note, I would like to thank my friends and batch-mates Harshita Pathak, Guneet Kaur, Pratibha Nair and Susmita Sahu for the beautiful times we spent together during lectures, assignments and birthday parties. I would also like to thank my seniors Dr Nirmal Kumar Saha, Nemika Relhan and Ritu Paliwal for always being so helpful and kind to me. My friends in TERI University Aditi (Addy) Banerji, Dr Nishritha Bopana, Sangeeta Sen Ray and Ritu Paliwal find special mention for their love and support. Thank you ladies!! for all the help, and encouragement. I can’t ever forget those serious discussions (!) during lunch and tea breaks. Thank you Addy! (my soul sister) for the all the help you provided in this thesis and more importantly for your affection, care and emotional support.

I wish to thank Dr Vibhu Jain and the “Open access” community for providing the required scientific articles.

During my stay in Gent, I met some truly wonderful people, who are now my friends for life, Amit Kumar, Dr Kalibabu Katnam and Dr Susana Prieto. Thank you friends! for making my stay in Gent, a wonderful experience.

On a very different note, I would like to thank: the music of Bollywood, Boyzone, Nelly Furtado and Beatles for keeping me sane during the never-ending task of thesis formatting and presentation; tea from the producers of Assam and Darjeeling for keeping me thinking and concentrating on my writing and Eatopia (the food court) where I spent wonderful times with my friends.

Finally, I have to say 'thank-you' to all my family: grandparents, uncles, aunts and cousins. I thank my brothers Mohit, Sohit, sister-in-law Kanika for their undying love, and our little bundle of joy Neel (my nephew) for his innocent smile. I would like to thank my in-laws for their love and support. My brother-in-law Kailash finds special mention for his help in sharing the household work and responsibilities when I was busy writing the thesis.

I thank my husband Dr Deepak Pant for his love which stands above mountains and across seas (literally!!!!!!). Thank you for patiently listening to me and sharing everything from my happiness to my frustration, from my fanciest dreams to my worst fears. You have been my biggest strength through happy and difficult times.

And finally it comes to two most important people, my parents, who mean the world to me. Maa and Papa!!! I am short of words as I want to thank you for providing me the best of education, the freedom to pursue my dreams, the faith you always had in me and the support you lent whenever I took any decision for myself. Thank you for everything.

It’s to you Maa and papa, I dedicate this thesis.
