ACKNOWLEDGEMENTS

‘Internalizing environmental considerations in decision making’ is the mantra for sustainability that I learnt during my long stint at the Ministry of Environment and Forests, Government of India. I am indebted to all my colleagues at various points of time in the Ministry for enlarging my horizon.

In fact, I had been exposed to a wide range of subjects albit to varying degrees, as a generalist administrator in my career. Consequently, after joining the TERI University as a research scholar in the year 2006, I had a number of fields and options open to me to decide about the topic for my dissertation. While evaluating various options, I was of the view that my research work should not be a mere piece of academic pursuit but also ought to be relevant to the public policy within the Indian context.

I am grateful to Dr. Surender Kumar, who not only took me on to an interesting journey of ‘environmental economics’ during the course work at TERI University but also helped me in deciding the research topic entitled, “Intergovernmental Fiscal Transfers and the Environment: A Study of India” and who eventually agreed to become my Supervisor. But for his continuous guidance and sustained perseverance, it would not have been possible for me to complete my research.

I am also grateful to all my gurus at TERI University and other privileged academic institutions of my career for allowing me to question the way the things as they are, at present and what needs to be done to improve them.

I take this opportunity to acknowledge the constant encouragement and the help of Dr. R. K. Misra, Director, Institute of Public Enterprises, Hyderabad and his other colleagues in providing me access to their library resources, sharing their thoughts with me and chiselling this dissertation.

Likewise, I am sincerely indebted to Sri V. K. Srinivasan, IAS (Retd.) and Dr. Rajiv Sharma, IAS, Director General, Centre for Good Governance, Hyderabad and his colleague Sri N. Rama Krishna for their constructive suggestions and inputs from time to time. I also acknowledge my colleague Sri D. Viplov Babu for his valuable help in putting together the dissertation. Indeed, I would be happy to witness environment becoming an integral part, sooner than later, of intergovernmental fiscal transfers in India.
I with all love and humility express my gratitude to all my family members and friends for remaining with me during the high and low phases of my life, and for being ready with their saner counsel at various points of time.

Last but not the least thanks are also due to our daughter Rhea who compelled me to go on with this research work along with her pursuit of studies.

Shailendra Kumar Joshi
