ACKNOWLEDGEMENTS

As a female I have always wondered at the level and pattern of gender discrimination in the society when the probability of birth of a human being in either gender remains equal. It was my lurking long-time desire to bring out whether the extent of gender discrimination at various levels of human attainment has decreased over the years since efforts in this direction were embedded in our various planning programmes. Choice of this topic is obviously guided by my desire to assess whether females fare at par with males even after 50 years since independence.

This work could not have been completed without good wishes and active support of a number of persons. First of all I owe my deep sense of gratitude and indebtedness to my supervisors Prof. Asit Kumar Banerjee, Economics Department, Burdwan University and Prof. Soumyendra nath Sikdar, Economics Department, Calcutta University for their keen interest and earnest guidance throughout the phase of preparation of this thesis.

I also gratefully acknowledge the continuous inspiration and constant motivation provided to me by my father Shri Bimal Kumar Banerjee, Ex Head of the Department of Economics, Bankura Sammilani College, since my undertaking research fellowship in the Department of Economics, Burdwan University.

I also wish to express my sincere gratitude to my husband Dr. Soumyendra Kishore Datta, Professor, Department of Economics, Burdwan University. His continuous co-operation and moral support is inherent throughout the entire study. I am also grateful to my beloved child Sudeepan Datta (Arya) for his patience in allowing me to complete the study in an undisturbed mind.

My thanks are due to Dr. Kausik Gupta Head of the Department of Economics, Burdwan University and Mrs. Anita Gupta, Department of Economics,
Muralidhar Girls’ College, Calcutta for their constant encouragement and good wishes in this work.

I am immensely benefited by Dr. Prabhat Kuri, Reader, Economics Department, Burdwan University, for providing me some important data, without which the study would have stumbled in the mid way. I am also indebted to Dr. Phalguni Mukherjee, Department of Economics, J.K College, Purulia for occasional moral boost provided to me to enhance tenacity in the course of this study.

I have been extremely benefited from the rich source of materials and data provided by the library of Indian Statistical Institute, Calcutta; Central Library, University of Burdwan as well as the National Library and I would remain ever thankful to the authorities of these institutes.

I am also thankful to Mr. Krishna Majumdar for his sincere efforts in taking computer print of the thesis.

However I would like to take the whole responsibility for any small error remaining in my study.

Date: 23.12.04.  

Piali Bandyopadhyay (Datta)
