Acknowledgements

There are many people I need to thank before I can begin discussing my work. These people contributed in one way or another and helped me in carrying out my work and bringing it to this shape.

I will start by thanking each and every member of my study populations, Dhodia and Dubla, for unconditionally agreeing to be a part of my research work and for being highly cooperative. I am grateful to people of Valsad district in general; and to the members of Valsad Raktdan Kendra in particular for being thoughtful and friendly. The honorary Director of the Centre, Dr Yazdi Italia and his team helped me immensely during my fieldwork; with accommodation, rapport establishment, sample collection and a whole lot more. Bhavesh Bhai, laboratory officer at the Valsad Raktdan Kendra, not just helped me with my work but went beyond what was required of him; and he and his family lovingly welcomed me into their home during my visits to Valsad. Other members of the Centre like Jeetu Bhai, Mahendra, Santhosh Bhai, Ajay, Manoj Bhai, Zarir Bhai, Bhaskar Sir also went out of their ways to help me with data collection. My experience of working in Valsad was made all the more memorable because of their support and kindness.

I want to express my sincere and earnest gratitude towards Dr. Gautam K. Kshatriya for kindly consenting to be my Ph.D. supervisor and for guiding me through my thesis work. Had it not been for him, I might not have done my doctoral work in the field of population genetics. He consistently supported me and encouraged me to do better throughout the duration of my research work. I especially need to thank him for being extremely patient with me. He reminded me from time to time that it is not sufficient to know just about one’s own research topic but it is essential for a researcher to keep learning new things. His knowledge and experience in research methodologies, statistics and population genetics have helped me in bringing my thesis to its present form. I am deeply indebted to him for playing an instrumental role in my research work.
I am also grateful to Prof. S.L. Malik, present head of the Department of Anthropology; and Prof. Surinder Nath and Prof. P.K. Ghosh, previous heads of the Department of Anthropology, for providing me the necessary infrastructure and facilities during my research work. I would also like to thank Prof. A.K. Kapoor and Prof. M.P. Sachdeva, members of my advisory committee, for giving me valuable suggestions during my research tenure. I am also thankful to all the faculty members of my department for giving me training in various aspects of Anthropology and for always encouraging me.

I am extremely thankful to Dr. K.N. Saraswathy for providing me the support and opportunity to get experienced in techniques of molecular genetics and for always being concerned and encouraging. I owe thanks to my colleagues in Biochemical and Molecular Anthropology Laboratory as well who were always friendly and cooperative. I would like to make a special mention of my senior Dr. Ekata Sinha for training and helping me in laboratory analysis.

I would also like to acknowledge the cooperation extended by the technical and non-technical staff of my department; of different libraries and places that I visited during the course of my research work, both in Delhi and Gujarat. Mr. Sunny Chopra of M/s Arun Thesis deserves special thanks for patiently formatting my thesis and providing me with the final draft in time.

There is a whole list of my friends whom I need to thank for a lot of things. Dr. Mansi Bahukhandi (nee Gauniyal) not just accompanied me to my first field work but was a constant source of inspiration to work harder. Mr. Aniket Kumar, Ms. Priyanka Khurana and Dr. Ispa Pattanayak provided me the pleasure of their much appreciated company and support throughout. I am obliged to Dr. Vipin Gupta for always being concerned and forthcoming with constructive suggestions. I am extremely grateful to Dr. Gagandeep Kaur Walia for generously helping me out with the compilation of my thesis. Each one of them, along with Dr. Mansi Verma, consistently encouraged and supported me, both academically and otherwise and helped me in innumerable ways. I am also obliged to Dr. Md. Asghar who enthusiastically helped me with initial formatting of the thesis.
I am thankful to Indian Council of Medical Research (ICMR) for providing me financial support during the period of my research work.

In the end I want to express my heartfelt thanks and love towards my family members for always being there for me no matter what. I am profoundly indebted towards them, especially my father Mr. B.M. Aggarwal, for letting me make my own decisions and helping me in seeing them through. He, along with my brother Anugrah Aggarwal and sister-in-law Parul Aggarwal, always gave me their unconditional support and love. Had it not been for the continued encouragement and strength given by them and their belief in me, I would not have been able to complete this work. I want to express my thanks and love towards my little nephew Atishay Aggarwal as well for being a source of happiness and rejuvenation in my life.
