CHAPTER VI
SUGGESTIONS FOR FURTHER RESEARCH IN THE AREA
Chapter VI
SUGGESTIONS FOR FURTHER RESEARCH IN THE AREA

DPEP has been the greatest intervention in the field of primary education since independence and the present study is a very simple one only to assess its impact. More extensive studies on DPEP is greatly needed as the programme is still going on in other districts of the state. On the basis of the findings of the present study the investigator would like to highlight some research problems which may be taken up by further researchers–

1. In the present study emphasis was given to assess the impact on the tribals only. But quite a number of extensive studies are required which may take-up the other Special Focus Groups such as teatribe, Scheduled caste, Char area etc. of other district of the state also.

2. Studies can also be taken up to assess the achievement levels of students of different classes on different subject.

3. Attempts can also be made to study whether there is any relationship between learning achievement of the students and family back ground.

4. An extensive study can be made to assess the effectiveness of the present curriculum of primary level.

5. Functioning of Village Education Committees, Cluster Resource Centres, Block Resource Centres, Academic Resource Centres etc. can also be evaluated through extensive
6. DPEP has the provision to provide primary education to out of school children of the age group of 9-14 years through Non-Formal Education (NFE) and Alternative School (AS). Studies may also be taken up to assess the functioning and effectiveness of these Non-Formal Education Centres and Alternative Schools.

7. For success of any project, community participation is very much important. So, studies may also be taken up on community participation in the DPEP districts of the state.

8. The impact of DPEP on girl’s education in different DPEP intervened areas may also be assessed through some extensive studies.

9. DPEP has given importance on use of various Teaching-Learning Materials (TLM) in the classroom. Attempts may also be taken to assess the uses and effectiveness of these Teaching-Learning Materials in the classroom.

10. Studies may also be conducted to find out measures for successful completion of the project in the state.
