</table>
different years showing declining concentration towards the mid events.

3.11 Variation of minimum, maximum and mean sulphate contents of rainwater for all the 23 events in 8 sampling stations.

3.12 The pattern of variation of sulphate content of rainwater for a first event and a middle event of the rainy season during the second year (B-1 and B-5) and the third year (C-1 and C-5).

3.13 Event-to-event variation pattern of sulphate content of rainwater with respect to three sampling stations. The event C-1 occurring after a long dry period had abnormally high contribution.

3.14 The maximum, minimum and mean chloride contents for all the sampling stations.

3.15 Event-to-event variation of chloride content for three sampling stations (1, 2 and 3 – from front to back) showing similarities in the pattern of variation.

3.16 Pattern of behaviour of the mean, minimum and maximum nitrate concentration of rainwater at Guwahati.

3.17 Event-wise changing pattern of nitrate concentration in the second year (top) and the third year (bottom) with the sampling stations spread from front to back.

3.18 Variation of phosphate content of rainwater at Guwahati at sampling station 7 (top) and at sampling stations 1, 2, 3 and 4 (bottom)

3.19 Ranges of fluoride concentrations in rainwater of Guwahati. The
dotted line indicates variation pattern of the mean values.

3.20 Variation of fluoride concentrations in rainwater of Guwahati for the first showers (A-1, B-1 and C-1) in each of the three years.

3.21 Event-to-event variation of fluoride concentration for two stations 1 and 2.

3.22 Ranges of sodium content of rainwater at Guwahati

3.23 Variation of sodium content of rain water from event to event for the sampling stations, 1 and 7.

3.24 Variation of sodium content from station to station in the first showers (A-1, B-1 and C-1) of each year.

3.25 The spread of potassium contents of rainwater at Guwahati.

3.26 Event-wise variation of potassium content for the sampling stations, 1 to 4.

3.27 Potassium variation from station to station for the first event of second year and third years (B-1 and C-1).

3.28 Potassium variation from station to station for the last event of second year and third years (B-9 and C-8).

3.29 Variation of calcium content of rainwater over Guwahati for the events in the second year (the symbols represent different sampling stations).

3.30 Variation of calcium content of rainwater over Guwahati for the events in the third year (the symbols represent different sampling stations).

3.31 Variation of minimum, maximum and mean calcium contents of
rainwater over Guwahati for the events in the three years.

3.32 Ranges of values of Mg-content of wet precipitation over Guwahati

3.33 Variation of Mg-content between first and second events of the three years

3.34 Variation of Mg-content from event to event for the sampling stations (1, 4, 7)

3.35 Average relative proportion of trace elements in the wet precipitation at station 1 (top) and at station 2 (bottom).

3.36 Average relative proportion of trace elements in the wet precipitation at station 3 (top) and at station 4 (bottom).

3.37 Average relative proportion of trace elements in the wet precipitation at station 5 (top) and at station 6 (bottom)

3.38 Average relative proportion of trace elements in the wet precipitation at station 7 (top) and at station 8 (bottom).

3.39 Ranges of values for iron (top) and manganese (bottom) contents of wet precipitation over Guwahati for three years.

3.40 Ranges of values for zinc (top) and boron (bottom) contents of wet precipitation over Guwahati for three years

3.41 Relative change in wet precipitation quality during the first 10 min and the next 10 min of an event for location 8 (top) and 3 (bottom).

[1-pH, 2- Conductance in (μS/cm)/10, 3- HCO₃⁻, 4- Cl⁻, 5- SO₄²⁻, 6- NO₃⁻x10, 7-Na⁺x10, 8-K⁺x10, 9- Ca²⁺. All ionic Concentrations in mg/L]
4.1 Station to station variation of pH for any four events.
4.2 Variation of max-min and mean values at all eight stations
4.3 Station to station variation of pH at the beginning of the season
4.4 Max - min and mean values of conductivity ($\mu$S cm$^{-1}$) in eight stations
4.5 Conductivity value ($\mu$S cm$^{-1}$) at station 1
4.6 Percentage composition of $\text{HCO}_3^-$ at station 3 (Event AO-1)
4.7 Percentage composition of $\text{HCO}_3^-$ at station 3 (Event BO-1)
4.8 Percentage composition of $\text{HCO}_3^-$ at station 3 (Event CO-1)
4.9 Conc. variation of $\text{HCO}_3^-$ (meq dm$^{-3}$) in runoff at station-1 and 3.
4.10 Concentration variation of Cl$^-$ at station 1
4.11 Percentage composition of components in runoff water. (Event AO-1)
4.12 Percentage composition of components in runoff water. (Event BO-1)
4.13 Percentage composition of components in runoff water. (Event CO-1)
4.14 $\text{SO}_4^{2-}$ concentration at station 3
4.15 $\text{SO}_4^{2-}$ concentration in two events of different nature.
4.16 $\text{SO}_4^{2-}$ concentration in four characteristic events
4.17 Concentration of $\text{PO}_4^{3-}$ in station 1 and 2.
4.18 Variation of $\text{PO}_4^{3-}$ concentration (max – min values).
4.19 $\text{PO}_4^{3-}$ concentration in the first events of the 2$^{nd}$ and 3$^{rd}$ year.
4.20 Variation of $\text{NO}_3^-$ concentration in runoff at three stations in the
entire period.

4.21 High variation at station 3 and 6 in event BO-1 & BO-2.  214
4.22 Variation of F⁻ concentration in runoff water.  217
4.23 Variation of Ca²⁺ concentration in the study period.  220
4.24 Concentration variation of Ca²⁺ in the middle of rainy season (2nd year)  220
4.25 Mg²⁺ concentrations in the first events of the years.  223
4.26 Mg²⁺ concentration at four stations in the event CO-1  223
4.27 Na⁺ concentration at station 1.  227
4.28 Variation of Na⁺ concentration in runoff water.  227
4.29 Variation of K⁺ concentration at station 1 and 2.  229
4.30 Concentration of Fe and Mn at station-1  233
4.31 Percentage composition of elements at station 1 in the event BO-1  233
4.32 Concentration of Pb in run-off at station-1.  234
4.33 Fe concentration at station-2  237
4.34 Percentage composition of elements at station-2, event AO-1  237
4.35 Concentration of Pb at station-3  239
4.36 Percentage composition of elements in the event BO-1 at station 3.  239
4.37 Concentration trend of Cu, Mn, B and Pb at station-4  242
4.38 Concentration of Fe at station-4.  242
4.39 Percentage composition of elements at station 4 (event CO-1)  243
4.40 Concentration of Fe at station 5  245
4.41 Concentration of B at station 5.  245
4.42 Concentration of Fe and Mn at station 6  248
4.43 Percentage composition of runoff at station-6, event-CO-1 248
4.44 Variation of concentration values at station-6 249
4.45 Percentage composition of the elements at station-7 in the event BO-1 251
4.46 Variation of Pb concentration at station-7 251
4.47 Percentage composition of elements in the event CO-1 at station-8 254
4.48 Variation of element concentration at station-8 254
4.49 Linear correlation between bicarbonate content of runoff and bicarbonate content of rainwater in station 7. 267
4.50 Linear correlation between sulphate content of runoff and sulphate content of rainwater in station 2. 267
