2.9.6. Liquid smoking treatment
2.9.7. Production of smoke
2.9.8. Chemical constituents of wood smoke
2.9.9. Antioxidant effect.
2.9.10. Imparting of smoked flavour
2.9.11. Colour development in smoked product
2.9.12. Effect on nutritive value of foods
2.9.13. Carcinogenic compounds of wood smoke
2.9.14. Product storage
2.10. Battering and breading of fishery products
2.10.1. Equipments used for coating of seafoods
2.11. Microbial changes during processing and storage
2.11.1. Processing and icing
2.11.2. Freezing
2.11.3. Prepared products
2.11.4. Smoking
2.12. Sensory evaluation

III. MATERIAL AND METHODS
3.1. Materials
3.1.1. Raw material
3.1.2. Packaging material
3.1.3. Ice box
3.1.4. Ice
3.1.5. Saw dust and wood shavings
3.2. Sub materials
   a) Seasoning mixture b) Battering mixture c) Bread crumbs d) Vegetable oil
3.3. Equipments
3.3.1. ABS – air blast freezer
3.3.2. AFOS Torry mini kiln
3.4. Chemicals
3.5. Microbiological media and reagents
3.6. Methods
3.6.1. Study of raw material characteristics
3.6.1.1. Physical characteristics
3.6.1.2. Sensory characteristics
3.7. Pre-process operation / processing method
3.8. Ice storage studies
3.9. Production of battered and breaded octopus
3.9.1. Standardisation of spice mixture
3.9.1.1. Standardisation of batter
3.9.2. Breading
3.9.3. Freezing
3.9.4. Frying
3.9.5. Selection of batter
3.10. Production of smoked octopus
3.10.1. Standardisation of salt concentration / brining for smoking
3.10.2. Standardisation of smoking time
3.10.3. Packing
3.11. Treatment with cryoprotectants / chemicals
3.11.1. Standardisation of concentration and time for pretreatment
3.11.2. Standardisation of sodium tri-poly phosphate treatment
3.11.3. Standardisation of sodium citrate treatment
3.12. Evaluation of quality changes during storage
3.12.1. Biochemical analysis
3.12.1.1. Estimation of phosphorus
3.12.1.2. Moisture
3.12.1.3. Total protein
3.12.1.4. Ash
3.12.1.5. Total lipids
3.13. Lipid quality
3.13.1. Peroxide value
3.13.2. Free fatty acids
3.14. Freshness indices
3.14.1. Preparation of TCA extract
3.14.2. Total volatile base nitrogen
3.14.3. Trimethylamine-nitrogen
3.14.4. Alpha amino nitrogen
3.14.5. Salt soluble nitrogen
3.14.6. Non protein nitrogen
3.14.7. Water soluble nitrogen
3.14.8. pH
3.14.9. Steam volatile and non volatile phenolic compounds
3.14.10. Hypoxanthine
3.14.11. Drip Loss
3.15. Total amino acid analysis
3.15.1. Estimation of tryptophan
3.16. SDS-PAGE analysis for total proteins pattern
3.17. Determination of heavy metals concentration
3.17.1. Preparation of samples
3.17.2. Preparation of standards a) Zinc b) Lead c) Cadmium d) Mercury
3.17.3. Analysis of mercury
3.17.4. Analysis of other metals
3.18. Microbiological characteristics
3.18.1. Total plate count
3.18.1.1. Psychrophiles
3.18.2. Protocol for the isolation of *Salmonella* spp. from sea foods
   a. Preparation of foods for isolation of *Salmonella* spp.
   b. Isolation of *Salmonella* spp.
   c. Incubation of selective enrichment media
   d. Typical *Salmonella* spp. colony morphology
   e. Atypical *Salmonella* spp. colony morphology
3.18.3. Pre-enrichment broths, culture media, reagents etc.
3.18.4. Procedure for enrichment and isolation of *V. cholerae*
3.18.5. Procedure for enrichment and isolation of *Vibrio parahaemolyticus*
3.19. Organoleptic evaluation
3.19.1. Organoleptic scores
3.20. Statistical analyses

IV. RESULTS

4.1. Physical characteristics
4.1.1. The meat composition and characteristics
   a) Bio-chemical, microbiological and sensory characteristics
   b) Amino acid composition of fresh octopus
   c) Heavy metals concentration
4.2. ICE STORAGE OF OCTOPUS; Changes in
   a) Moisture b) Protein
   c) Total lipids  d) Ash  e) Salt soluble nitrogen
   f) Water soluble nitrogen  g) Non protein nitrogen  h) Peroxide value
   i) Free fatty acid  j) Total volatile base nitrogen
   k) Tri-methyl amine nitrogen  l) pH  m) Hypoxanthine n) TPC count
   o) Psychrophiles p) Organoleptic evaluation
4.3. Pearson correlation significance (P) between sensory scores and quality parameters of WOI, DOI and DPI samples during iced storage
4.3.1. Whole octopus
4.3.2. Dressed and iced octopus
4.3.3. Dressed, packed and iced octopus
4.4. DEVELOPMENT OF VALUE ADDED PRODUCTS FROM OCTOPUS
4.4.1. Production of battered and breaded octopus
4.4.1.1. Standardisation of spice mixture and batter
4.4.1.2. Standardisation of batter
4.4.1.3. Changes in weight of meat during mixing and coating
4.4.2. Production of smoked octopus
4.4.2.1. Standardisation of brining concentration and time for smoking of octopus
4.4.2.2. Standardisation of smoking time and temperature
4.4.2.3. Selection of wood saw dust
4.4.2.4. Effect of smoking on the bio-chemical composition and freshness parameters of octopus meat

4.5. Changes in quality of dressed octopus (control), battered & breaded octopus and smoked octopus during frozen storage

4.5.1. Bio-chemical changes
4.5.1.1. Moisture
4.5.1.2. Total protein
4.5.1.3. Total lipids
4.5.1.4. Salt soluble nitrogen
4.5.1.5. Non protein nitrogen
4.5.1.6. Peroxide value
4.5.1.7. Free fatty acids
4.5.1.8. Alpha amino nitrogen
4.5.1.9. Total volatile base nitrogen
4.5.1.10. pH

4.5.2. Total phenols
4.5.3. Microbiological analysis
4.5.3.1. Total plate count
4.5.3.2. Salmonella spp.
4.5.3.3. *Vibrio cholerae* and *Vibrio parahaemolyticus*

4.5.4. Sensory quality characteristics
4.5.5. The Pearson correlation significance between biochemical and microbiological parameters and sensory scores of prepared and frozen stored octopus products

4.5.5.1 Control sample
4.5.5.2 Battered and breaded octopus
4.5.5.3 Smoked octopus

4.6. **EFFECT OF PRETREATMENT ON THE FROZEN STORAGE STABILITY OF PRETREATED OCTOPUS.**

4.6.1. Standardisation of sodium tri-poly phosphate treatment
4.6.2. Standardisation of sodium citrate treatment
4.6.3. Changes in quality of pretreated octopus and control octopus during frozen storage
4.6.4. Bio-chemical changes
4.6.4.1. Moisture
4.6.4.2. Total nitrogen
4.6.4.3. Total lipids
4.6.4.4. Salt soluble nitrogen
4.6.4.5. Non-protein nitrogen
4.6.4.6. Peroxide value
4.6.4.7. Free fatty acid
4.6.4.8. Alpha amino nitrogen
4.6.4.9. Total volatile base nitrogen
4.6.4.10. pH
4.6.4.11. Drip loss
4.6.4.12. Cook loss
4.6.4.13. SDS-PAGE analysis
4.6.5. Total plate count
4.6.5.1. *Salmonella* spp.
4.6.5.2. *Vibrio cholerae* and *Vibrio parahaemolyticus*
4.6.6. Sensory quality characteristics
4.6.7. The Pearson correlation significance between sensory scores and biochemical and microbiological parameters of pretreated and frozen stored octopus
4.6.7.1. STPP sample
4.6.7.2. SC sample
4.6.7.3. H₂O₂ sample
4.6.7.4. Control sample

V. DISCUSSION
5.1. Physical characteristics
5.1.1. The meat composition and characteristics
a) Bio-chemical, microbiological and sensory characteristics
b) Amino acid composition of fresh octopus
c) Heavy metals concentration
5.2. ICE STORAGE OF OCTOPUS AND CHANGES IN QUALITY DURING ICE STORAGE.
5.2.1. Quality changes during ice storage;
   a) Moisture
   b) Protein
   c) Total lipids
   d) Ash
   e) Salt soluble nitrogen
   f) Water soluble nitrogen
   g) Non protein nitrogen
   h) Peroxide value
   i) Free fatty acids
   j) Total volatile base nitrogen
   k) Tri-methyl amine-nitrogen
   l) pH
   m) Hypoxanthine
   n) Total plate count
   o) Psychrophiles
   p) Organoleptic evaluation
5.2.2. Pearson correlation significance (P) between sensory scores and quality parameters of WOI, DOI and DPI samples during iced storage
5.3. DEVELOPMENT OF VALUE ADDED PRODUCTS FROM OCTOPUS

5.3.1. Battered and breaded octopus
5.3.2. Smoked octopus

5.3.2.1. Standardisation of brining
5.3.2.2. Standardisation of smoking time and temperature
5.3.2.3. Selection of wood saw dust
5.3.2.4. Smoking
5.3.2.5. Smoking temperature profile
5.3.2.6. Effect of smoking on the bio-chemical composition and freshness parameter of octopus meat

5.3.3. Freezing temperature profile

5.4. Changes in quality of frozen stored dressed octopus (control), battered and breaded octopus & smoked octopus

5.4.1. Bio-chemical changes

5.4.1.1. Moisture
5.4.1.2. Total nitrogen
5.4.1.3. Total lipids
5.4.1.4. Salt soluble nitrogen
5.4.1.5. Non-protein nitrogen
5.4.1.6. Peroxide value
5.4.1.7. Free fatty acids
5.4.1.8. Alpha amino nitrogen
5.4.1.9. Total volatile base nitrogen
5.4.1.10. pH
5.4.1.11. Total phenols
5.4.1.12. Total plate count
5.4.1.13. *Salmonella* spp.
5.4.1.14. *Vibrio cholerae* and *Vibrio parahaemolyticus*

5.4.2. Sensory quality characteristics

5.4.3. The Pearson correlation significance between sensory scores and biochemical and microbiological parameters of

5.4.3.1. Control sample
5.4.3.2. Battered and breaded octopus
5.4.3.3. Smoked octopus

5.5. EFFECT OF PRETREATMENTS ON THE FROZEN STORAGE STABILITY OF OCTOPUS

5.5.1. Standardisation of sodium tri-poly phosphate treatment
5.5.2. Standardisation of sodium citrate treatment
5.5.3. Changes in quality of pretreated octopus and control during frozen storage

5.5.3.1. Bio-chemical changes
5.5.3.2. Moisture
5.5.3.3. Total nitrogen
5.5.3.4. Total lipids
5.5.3.5. Salt soluble nitrogen
5.5.3.6. Non-protein nitrogen
5.5.3.7. Peroxide value
5.5.3.8. Free fatty acid
5.5.3.9. Alpha amino nitrogen
5.5.3.10. Total volatile base nitrogen
5.5.3.11. pH
5.5.3.12. Drip loss
5.5.3.13. Cook loss
5.5.3.14. SDS-PAGE analysis of protein
5.5.4. Total plate count
5.5.5. *Salmonella* spp.
5.5.6. *Vibrio cholerae* and *Vibrio parahaemolyticus*
5.6. Sensory quality characteristics
5.7. The Pearson correlation significance between sensory scores and biochemical and microbiological parameters of pretreated and frozen stored octopus.
5.7.1. STPP sample
5.7.2. SC sample
5.7.3. H₂O₂ sample
5.7.4. Control sample

VI. SUMMARY

VII. BIBLIOGRAPHY

VIII. APPENDIX

8.1 Questionnaire used for sensory evaluation of chemicals treated octopus / prepared products / ice stored octopus
