LIST OF FIGURES

Figure 1.1 Synthesis of azo dyes ................................................................. 4

Figure 1.2 Schematic representation of decolorization and mineralization under anaerobic-aerobic condition ...........................................19

Figure 1.3 Structure of some common redox mediators......................... 25

Figure 2.1 Chemical structure of Red BS and Methyl Red.................... 34

Figure 3.1(a) Phylogenetic tree of *Psuedomonas aeruginosa* ................. 52

Figure 3.1 (b) Phylogenetic tree of *Escherichia hermannii* ................... 53

Figure 3.1 (c) Phylogenetic tree of *Stenotrophomonas maltophilia* .......... 53

Figure 3.2 (a-e) The carbon utilization profile of individual pure cultures and co- cultures................................................................. 55-57

Figure 3.3 Growth and decolorization profile of (a) Red BS dye (b) Methyl Red ................................................................. 61

Figure 3.4 Effect of culture condition on dye decolorization of Red BS and Methyl Red ................................................................. 62

Figure 3.5 Effect of co-substrates on dye decolorization of (a) Red BS and (b) Methyl Red dyes ................................................................. 64

Figure 3.6 Effect of initial concentration of glucose on decolorization of (a) Red BS and (b) Methyl Red ................................................................. 65

Figure 3.7 Effect of temperature on dye decolorization of (a) Red BS and (b) Methyl Red ................................................................. 66

Figure 3.8 Effect of pH on decolorization of (a) Red BS and (b) Methyl Red ...... 67

Figure 3.9 Effect of salt concentration on decolorization of (a) Red BS (b) Methyl Red dyes ................................................................. 69

Figure 3.10 Effect of initial dye concentration of (a) Red BS (b) Methyl Red decolorization efficiency bacterial consortium-PES .................... 70

Figure 3.11 Effect of redox mediators on decolorization rate of Red BS and Methyl Red ................................................................. 72

Figure 3.12 Effect of initial AQS concentration on decolorization rate of Red BS and Methyl Red ................................................................. 73

Figure 3.13 Effect of AQS on decolorization rate of (a) Red BS and (b) Methyl Red by Pure cultures and Consortium .................................................. 74-75
Figure 3.14 Effect of initial dye concentration (Red BS and Methyl Red) on AQS mediated decolorization by bacterial consortium-PES …76

Figure 3.15 AQS mediated repeated dye decolorization of (a) Red BS and (b) Methyl Red………………………………………………………….79

Figure 3.16 Effect of pH on Azoreductase Activity of *S.maltophilia*…………82

Figure 3.17 Effect of Temperature on Azoreductase Activity of *S. maltophilia* ……………………………………………………………………………83

Figure 3.18 Effect of FAD concentration of on Azoreductase activity of *S. maltophilia*……………………………………………………………………85

Figure 3.19 Lineweaver-Burk plot of azoreductase of *S. maltophilia* using variable concentration of Methyl Red……………………………………86

Figure 3.20 UV-Visible spectral analysis of Red BS during its decolorization batch culture by bacterial consortium PES……………………………….88

Figure: 3. 21 UV-Visible spectral analysis of Methyl Red during its decolorization in batch culture by bacterial consortium PES……88

Figure: 3.22 Densitometric scan of HPTLC chromatogram of Methyl red and its decolorized samples……………………………………………………………………90

Figure: 3.23 (a) FTIR spectrum of untreated Red BS dye (b) FTIR spectrum of decolorized Red BS sample…………………………………………………………………92

Figure: 3.24 (a) FTIR spectrum of untreated Methyl Red (b) FTIR spectrum of decolorized Methyl Red sample…………………………………………………………93-94

Figure 3.25 GC-MS analysis of decolorized extracted sample of Methyl-red and proposed pathway of its degradation…………………………95

Figure 3.26 Proposed pathway of Methyl Red dye degradation using bacterial consortium-PES…………………………………………………………………………….96

Figure 3.27 Decolorization efficiency of bacterial consortium-PES, immobilized by entrapment in different matrices………………98

Figure 3.28 Repeated decolorization of Red BS and Methyl Red by bacterial consortium-PES entrapped in agar beads………………100

Figure 3.29 Schematic diagram of packed bed reactor…………………………101

Figure 3.30 Effect of HRT on dye decolorization profile of Red BS and Methyl Red……………………………………………………………………………………102
Figure 3.31 Time-course profile of Methyl Red and Red BS decolorization in packed bed reactor operated at 2000 and 1600 DLR and 12 h HRT for 15 days………………………………………………………………105

Figure 3.32 Weight Profile of Earthworm exposed to (a) untreated Red BS (b) decolorized Red BS dye and (c) untreated Methyl red (d) decolorized Methyl Red dye solutions…………………………………………………………108

Figure 3.33 Mortality curve of earthworm P. posthuma exposed to (a) untreated Red BS dye (b) decolorized Red BS dye (c) untreated Methyl Red (d) decolorized Methyl Red dye……………………………………110

Figure 3.34 Effect of Red BS and MR untreated and decolorized dye solution on the head, clitellum and abdomen protein content of earthworm……112
