Contents

Preface i-v

Chapter-1
General Introduction on Coordination Chemistry 1-33

1.1. General introduction on coordination chemistry 1
1.2. Coordination compounds in nature 2
1.3. Coordination compounds in medicinal chemistry 5
1.4. Coordination compounds in industry 8
1.5. Coordination compounds as antimicrobial agents 10
1.6. Coordination compounds as antioxidant agents 11
1.7. Coordination compounds as xanthine oxidase inhibitory agents 12
1.8. Coordination compounds as anticancer agents 13
1.9. Macrocyclic and aza-macro cyclic compounds 16
1.10. Aims and objectives 20
1.11. Reference 21

Chapter-2
Synthesis, Characterization and Biological Applications of Mononuclear Azamacro cyclic Metal Complexes 34-96

2.1. Introduction 34
2.2. Literature review 35
2.3. Experimental section 39
2.4. Characterization 49
2.5. Pharmacology 51
2.6. Results and discussions 54
2.7. Conclusion 87
2.8. References 88

Chapter-3

Preparation, Characterization, Xanthine Oxidase, Antioxidant and Antimicrobial Activity of Cu(II), Ni(II), Zn(II) and Ag(I) Azamacrocycle Complexes 97-145

3.1. Introduction 97
3.2. Literature review 100
3.3. Experimental 105
3.4. Pharmacology 109
3.5. Results and discussion 112
3.6. Conclusion 134
3.7 References 136

Chapter-4

Synthesis, Characterization and Catalytic Activity of Azamacroyclic Transition Metal Complexes 146-180

4.1. Introduction 146
Chapter-5

Synthesis, Characterization, Biological and Catalytic Applications of Transition Metal Complexes with Schiff Base

5.1. Introduction 181
5.2. Literature review 183
5.3. Experimental 187
5.4. Pharmacology 191
5.5. Results and discussions 192
5.6. Conclusion 211
5.7 References 212
