FUTURE PERSPECTIVES

The simple, accurate, precise and robust stability indicating assay methods for the estimation of all the selected combinations in their formulations were developed. All these newly developed stability indicating methods for various drugs in combinations may be used in research institutions, quality control laboratories of small scale industries, quality control department in industries, for the analysis of the raw materials, intermediate products and finished products. Same method can be extended analysis of the drugs and their metabolites in the biological fluids. In future if degradation products are isolated and their structure elucidated by advance techniques it could provide us the insight of route of metabolism and degradation pathways.
