## CONTENTS

### 1 CHAPTER- 1:  INTRODUCTION  1- 8

1.1 Laws and statutes governing mine spoil rehabilitation/reclamation 3- 4
1.2 Problems in mine-spoil rehabilitation 4- 7
    1.2.1 Physical characteristics of the mine spoil 6
    1.2.2 Chemical characteristics of the mine spoil 6- 7
1.3 Revegetation of mine spoils 7- 8

### 2 CHAPTER- 2:  REVIEW OF LITERATURE  9- 72

2.1 PROBLEMS RELATED WITH REHABILITATION OF MINE SPOILS 10- 21
    2.1.1 Properties of the mine spoil 13- 15
    2.1.2 Nutrient poverty in mine spoils 15- 17
    2.1.3 Soil erosion and reduced water conservation 17- 18
    2.1.4 Toxicity of the mine spoil 18- 21

2.2 CHANGES AFTER REVEGETATION OF MINE SPOIL 21- 29
    2.2.1 Plant Succession 21- 25
    2.2.2 Species composition 25- 29

2.3 POSSIBLE INTERVENTIONS 29- 61
    2.3.1 Topsoil replacement 29- 32
    2.3.2 Chemical amendments and fertilization 32- 34
    2.3.3 Seedbank, seeding and planting 34- 43
    2.3.4 Selection of species for revegetation 43- 61

2.4 GROWTH OF PLANTED SPECIES 61- 62

2.5 PLANT SPECIES FOR VARIOUS USES BY THE LOCAL PEOPLE 62- 72

### 3 CHAPTER- 3:  STUDY AREA  73- 92

3.1 Location 73
3.2 Drainage pattern 73- 74
3.3 Climate 74- 77
    3.3.1 Temperature 75
    3.3.2 Rainfall 75
    3.3.3 Humidity 77
3.4.1 Geology of the area 77- 78
3.4.2 Bauxite profile at Panchpatmali 78- 79
3.5 Soil of the area 79- 80
3.6 Forest cover 80- 85
    3.6.1 Composition and condition of the forests 80- 81
    3.6.2 Forest types 81- 84
3.6.3 Degradation of the forests 84-85
3.7 People and their habitation 85-90
3.7.1 Shifting cultivation 88-90
3.8 Mine planning and design 90-91
3.9 Reclamation at Panchpatmali Bauxite Mine 91-92

4  CHAPTER-4: METHODOLOGY 97-116

4.1 STUDY OF UNDERSTOREY SUCCESSION 97-105
   4.1.1 Frequency 100
   4.1.2 Density and Abundance 100-101
   4.1.3 Basal Area 101
   4.1.4 Importance Value Index (IVI) 101
   4.1.5 Whitford’s Index 103
   4.1.6 Similarity Index (S) 103
   4.1.7 Species Diversity 104
   4.1.8 Concentration of Dominance (Cd) 104
   4.1.9 Species Richness (Sr) 104-105
   4.1.10 Evenness Index (E) 105

4.2 GROWTH OF PLANTED SPECIES 105-110
   4.2.1 Basal Area (BA) 108
   4.2.2 Parabolic Volume (PV) 108-109
   4.2.3 Relative Growth Rate (RGR) 109
   4.2.4 Tree growth comparisons at different sites 109-110

4.3 STUDY OF IMPORTANCE OF PLANTED SPECIES FOR THE PEOPLE OF THE STUDY AREA 110-112
   4.3.1 Selection of households (HH) 111-112

4.4 STUDIES FOR SUITABLE PACKAGE FOR MINE REHABILITATION 112-116
   4.4.1 Soil sampling 114
   4.4.2 Soil analysis 114-116

5  CHAPTER-5: RESULTS AND DISCUSSION 121-245

5.1 UNDERSTOREY SUCCESSION (PHYTO-SOCIOLOGICAL ANALYSIS) 121-172
   5.1.1 Importance Value Index (IVI) 122-131
   5.1.2 Density 131-133
   5.1.3 Whitford’s Index (A: F ratio) 134-136
   5.1.4 Invasion of species and Similarity Index 136-145
   5.1.5 Diversity Index and Concentration of Dominance 146-152
   5.1.6 Evenness Index (E) and Species Richness (Sr) 152-172

5.2 GROWTH ANALYSIS OF PLANTED SPECIES 172-219
   5.2.1 Eucalyptus hybrid 173-175
5.2.2 *Grevillea robusta* 175- 176
5.2.3 *Acacia auriculiformis* 176- 178
5.2.4 *Pinus kesiya* 178- 180
5.2.5 *Pongamia pinnata* 180
5.2.6 *Syzygium cumini* 180- 181
5.2.7 *Casuarina equisetifolia* 181- 183
5.2.8 Discussion on comparative Increment percent (P) and Relative Growth Rate (RGR) in various years of different plant species 183- 185

5.3 STUDY OF IMPORTANCE OF PLANTED SPECIES FOR THE PEOPLE OF THE STUDY AREA 220- 238

5.3.1 Information regarding the surveyed villages 220- 221
5.3.2 Demographic details of the surveyed villages 221- 224
5.3.3 Preferences for medical help 224
5.3.4 Importance of various planted and other species for the people of the area 230- 236

5.3.4.1 Sources of energy 230
5.3.4.2 Firewood species commonly being used 230
5.3.4.3 Commonly used timber species 231
5.3.4.4 Species used generally for making agricultural implements 231- 232
5.3.4.5 Species used as food 233
5.3.4.6 Species for medicinal use 233- 234
5.3.4.7 Other NTFP species commonly used by the people of the area 234- 236
5.3.5 People’s needs vis- a – vis rehabilitation measures 236- 238

5.4 STUDIES FOR SUITABLE PACKAGE FOR MINE REHABILITATION 239- 245

5.4.1 Soil texture 241
5.4.2 Soil pH 241- 242
5.4.3 Bulk density 242
5.4.4 Electrical conductivity (EC) 242- 243
5.4.5 Organic carbon (OC) 243
5.4.6 Total nitrogen 243
5.4.7 Available phosphorus 244
5.4.8 Available potassium 244

6 CHAPTER- 6 : CONCLUSION AND SUMMARY 250- 264

6.1 EFFICACY OF MINE REHABILITATION PLAN 250- 255
6.1.1 Understorey succession 250- 253
6.1.2 Growth performance of planted species 253- 255
6.2 Importance of planted species for the people of the area 255- 256
6.3 Prescriptions for a suitable rehabilitation package 257- 264
    6.3.1 Species recommended for plantation 259- 262
    6.3.2 Seeding of suitable species 262
    6.3.3 Recommendations for improvements in planting material 262- 263
    6.3.4 Recommendation for better top soil handling and soil work for plantation 263- 264

7 REFERENCES 265- 310
8 APPENDICES 311- 381

Appendix- I 311
Appendix- II 312- 345
Appendix- III (i) - III (xii) 346- 372
Appendix- IV 373- 375
Appendix- V 376
Appendix- VI 377
Appendix- VII 378-381
