ACKNOWLEDGEMENT

The author is very highly indebted to Dr. S. RENGANATHAN, Dean of Faculty of Engineering (MIT) for his excellent guidance, encouragement and motivation throughout this research work. Inspite of his busy schedule, being involved in many academic, institute, campus development and professional societal activities, Professor Renganathan was always available for expert guidance and advice.

The author is grateful to the VICE-CHANCELLOR of Anna University for providing him organisational facilities for carrying out this research work. The author is thankful to Dr. P. Kanagasabapathy, Professor & Head, Department of Instrumentation Engineering for providing an excellent academic and research environment in the department. The author is also thankful TNSCST for providing him with a Young Scientist Fellowship for the Year 1994-95. During the tenure of this fellowship, the author worked under Professor L. M. Patnaik, at Microprocessors Application Laboratory, IISc, Bangalore in the area of Genetic Algorithms for Fuzzy Logic Control. The author is also very thankful to Professor Patnaik for introducing him to Genetic Algorithms research.

The author thanks his colleagues in the Department of Instrumentation, his family and friends for their kind help and encouragement during the course of the research.
