SUGGESTIONS

1. Mobile phone Technology can equip students to independently organize their learning process. So, instead of being passive recipients of information, the students under the area of study should become active users of technology and for this of course the companies and academicians must create awareness in this regard.

2. While there is an urgent need for counseling services and parental guidance, some regulatory mechanism through the TRAI or mobile phone companies including network operators should be exercised to disseminate various related material and statutory warnings on the ill and negative impacts of cell phones uses on public in general and adolescents/youth in particular. This should also be made part of their corporate social responsibility towards the society.

3. The mobile handset manufacturing companies must keep in view the needs and expectations of college going students and accordingly provide the fundamental facilities in basic models even. This will make the advantages of features like internet, to-do list etc. available for the students who come from economically weaker sections of the society.

4. Deprivation of students from high end mobiles is a regular feature in developing economies. This however, creates a wider gap between the students who can afford and who cannot afford. This gap leads to depression, feeling of inferiority and also loss of confidence at times. Hence the offers should be made to reduce the loss of confidence at times.

5. Majority of the students under study were found to be well aware about the hazards associated with usage of mobiles however the efforts should be made to reduce the ill effects of use of mobiles.

6. Mobile phone industries must create awareness among the college going students for Internet services. These features should be made more user friendly and virus free. Gathering information on mobile phone saves time and gives comparative sources. Mobile phone services should be provided with a view to gain knowledge and not to demotivate students but for their future development.
7. It is the responsibility of each unit of the society to create awareness regarding the uses of advanced technology for development of the whole society to stand and make every component of the society compatible to compete globally.
