Summary

The present study deals with the comparison of personality traits between Kabaddi and Kho-Kho players with respect to neuroticism, Extraversion, Psychoticism and Lie-scale. The age ranged of Kabaddi and Kho-Kho players were 15-30 year. The data was collected with the help of Eysenck personality inventory. This inventory provides four psychological dimensions viz; Neuroticism, Extraversion, Psychoticism and Lie-scale.

In this study total 300 players were selected; out of 150 Kabaddi players. The data was treated statistically by employing “t” test to determine the significant difference of personality characteristics of players.

It had been hypothesized that there would be no significant difference of personality characteristics with respect to neuroticism between Kabaddi and Kho-Kho players. The results of the study (Table-2.1) revealed the existence of statistically significant difference of personality characteristics with respect to neuroticism was found between Kabaddi and Kho-Kho players. Kabaddi players were found to have got more neurotic tendency as compared to Kho-Kho players.

It had been hypothesized that there would be no significant difference of personality characteristics with respect to psychoticism of Kabaddi and Kho-Kho players. The results of the study (Table 2.2) revealed the existence of statistically significant difference of personality characteristics with respect to psychoticism was found between Kabaddi and Kho-Kho players. Kabaddi players were found to have got more psychoticism tendency as compared to Kho-Kho players.

It had been hypothesized that there would be no significant difference of personality difference with respect to extraversion between Kabaddi and Kho-Kho players. The results of the study indicate (Table 2.3) that statistically significant difference of personality characteristics was found between Kabaddi and Kho-Kho players. Kho-Kho players was found to have got less extrovert tendency as compared to Kabaddi players.
The result of the study did support to the ninth hypothesis of the study where in, it was stated that there would be no significant difference of personality traits with respect to lie-scale because, t-ratio reveals no statistically significant difference of personality traits with respect to lie-scale.

It has been hypothesized that there would be no significant difference of personality traits with respect to extraversion of Kabaddi girls and Kho- Kho players. The results of the study (Table 2.5) revealed the existence of statistically significant difference of personality characteristics with respect to extraversion was found between Kabaddi girls and Kho- Cowwoman players. Kabaddi Girls players were found to have got more extrovert tendency as compared to Kho- Kho women players.

It has been hypothesized that there would be no significant difference of personality traits with respect to psychoticism of Kabaddi girls and Kho- Kho women players. The results of the study (Table 2.6) revealed the existence of statistically significant difference of personality characteristics with respect to psychoticism was found between Kabaddi girls and Kho- Kho women players. Kho- Kho players was found to have got more psychoticism tendency as compared to Kabaddi girls players.

It has been hypothesized that there would be no significant difference of personality traits with respect to extraversion of Kabaddi girls and Kho- Kho women players. The results of the study indicated (Table 2.7) that statistically significant difference of personality characteristics with respect to extraversion was found between Kabaddi girls and Kho- Kho women players. Kho- Kho women players was found to have got less extrovert tendency as compared to Kabaddi girls players. Thus the hypothesis was not accepted.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho- Kho women players. The results of the study revealed that (Table-2.8) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho- Kho women players. The results of the study revealed that
(Table-2.9) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players. It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.10) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players. It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.11) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players. It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.12) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players. It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.13) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players. It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.14) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players. It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.15) statistically significant difference of personality traits with respect to lie-scale was
found between Kabaddi girls and Kho-Kho women players. Kabaddi girls’ players were found to have got more liars as compared to Kho-Kho women players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.16) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girls’ players were found to have got more liars as compared to Kho-Kho women players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.17) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girls’ players were found to have got more liars as compared to Kho-Kho women players. It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.18) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girls’ players were found to have got more liars as compared to Kho-Kho women players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.19) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girls’ players were found to have got more liars as compared to Kho-Kho women players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.20) no statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.21) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girls’ players were found to have got more liars as compared to Kho-Kho women players.
It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.22) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.23) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players.

It had been hypothesized there would be no significant difference of personality traits with respect to lie-scale of Kabaddi girls and Kho-Kho women players. The results of the study revealed that (Table-2.24) statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players. Kabaddi girls players were found to have got more liars as compared to Kho-Kho women players.
Conclusion

1. Statistically significant difference of personality characteristics with respect to neuroticism was found between Kabaddi and Kho-Kho players.

2. Kabaddi players were found to have got more neurotic tendency as compared to Kho-Kho players.

3. The existence of statistically significant difference of personality characteristics with respect to psychoticism was found between Kabaddi and Kho-Kho players.

4. Kabaddi players were found to have got more psychoticism tendency as compared to Kho-Kho players.

5. No significant difference of personality difference with respect to extraversion between Kabaddi and Kho-Kho players.

6. That statistically significant difference of personality characteristics was found between Kabaddi and Kho-Kho players.

7. Kho-Kho players were found to have got less extrovert tendency as compared to Kabaddi players.

8. No statistically significant difference of personality traits with respect to lie-scale.

9. The existence of statistically significant difference of personality characteristics with respect to extraversion was found between Kabaddi girls and Kho-woman players.

10. Kabaddi Girls players were found to have got more extrovert tendency as compared to Kho-Kho women players.

11. The existence of statistically significant difference of personality characteristics with respect to psychoticism was found between Kabaddi girls and Kho-Kho women players.

12. Kho-Kho players was found to have got more psychoticism tendency as compared to Kabaddi girls players.
13. Statistically significant difference of personality characteristics with respect to extraversion was found between Kabaddi girls and Kho-Kho women players.

14. Kho-Kho women players were found to have got less extrovert tendency as compared to Kabaddi girls players.

15. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players.

16. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players.

17. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players.

18. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players.

19. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players.

20. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players.

21. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players.

22. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players.

23. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players.

24. Kabaddi girl’s players were found to have got more liars as compared to Kho-Kho women players.

25. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho-Kho women players.
26. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

27. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

28. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

29. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

30. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

31. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

32. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

33. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

34. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

35. Significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

36. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

37. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.
38. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

39. No statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

40. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

41. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

42. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

43. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

44. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

45. Kabaddi girl’s players were found to have got more liars as compared to Kho- Kho women players.

46. Statistically significant difference of personality traits with respect to lie-scale was found between Kabaddi girls and Kho- Kho women players.

47. Kabaddi girls players were found to have got more liars as compared to Kho- Kho women players.
**Recommendation:**

The findings of the present study would lead to the following recommendation

1. A Similar study could be done in different game and sports.
2. A Similar Study could be done at high level players like National, International and Olympic Players.
3. A Similar study could be done among Kabaddi and Kho-Kho and others game and sports.
4. A similar study could be investigated among the players of two or more games.
5. A similar study could be done with subject belonging to different age groups.
