Acknowledgment

Though only my name appears on the cover of this dissertation, a great many people have contributed to its production. I owe my gratitude to all those people who have made this dissertation possible and because of whom I will cherish this experience forever. I take this opportunity to express my earnest appreciation to all who contributed in their own way to the success of this thesis, to only some of whom it is possible to give particular mention here.

Above all, I would like to thank my mother, brother and sister-in-law for their support and great patience at all times. My mother played a crucial role in not letting me deviate from my studies. My cousins, their spouse and relatives have given me their unequivocal support throughout, as always, for which my mere expression of thanks likewise does not suffice. I will remain in debt all my life for whatever my grandparents have done for me.

My deepest gratitude is to my advisor, Prof. C.V. Dharmadhikari. I have been amazingly fortunate to have an advisor who gave me the freedom to explore on my own and at the same time the guidance to recover when my steps faltered. He not only provided me an opportunity to work in his lab, but also has supported me in every possible manner for all these years. It has been an honor to be his Ph.D. student. His innate scientific intuitions have made him constant oasis of ideas and his passion in science has really inspired me and enriched my growth as a student.

The great advice, support and friendship of, Dr. Suwarna Datar, has been invaluable on both an academic and a personal level, for which I am extremely grateful. I consider myself lucky enough to perform many experiments in her presence. I am deeply grateful to her for the long discussions that helped me sort out the technical details of my work. I will remain in debt for what Suwarna Di, Shyam Da and their family have done for me.

Special thanks are due to Prof. S.V. Ghaisas, who always stood by whenever I needed and boosted confidence in me like a father does. I am grateful to him for holding me to a high research standard and enforcing strict validations for each research result, and thus teaching me how to do research. His patience and support helped me overcome
many crisis situations and finish this dissertation. I hope that one day I would become as good an advisor to my students as Ghaisas Sir has been to me.

I am extremely thankful to Dr. S.B. Iyyer for all his help during all these years. His immense knowledge in the field of electronics has made this project successful. He is a great teacher and his problem solving approach is something that I will cherish rest of my life. I found myself fortunate to learn applied electronics form him.

Our current and former HOD, Prof. S. I. Patil and Prof. P. B. Vidyasagar, are equally supportive in all my endeavors and I would like to place on record my truthful gratitude to both of them for providing me infrastructure and administrative help without any hindrance and encouraging me during my tenure both as an M.Sc. and Ph.D. student. I am also indebted to my collaborators for their suggestions and discussions. I also thank University of Pune-BARC Collaborative Research Program for granting me a research fellowship.

I would like to thank administrative, technical and non-teaching staff members of the department for the smooth functioning of day-to-day activities which enabled us to do research.

I would like to thank my present and past fellow lab-mates Minakshi Chaudhari, Kalyani Date and Sadhu Kolekar for the stimulating discussions and for all the fun we had done together. The group has been a source of friendships as well as good advice and collaboration.

I loved the extremely healthy spirit of helping each other among the research students of the Physics Department. We all enjoyed being in the department during work hours and even otherwise. It is a painful thought to leave this department which had been a home to me and played a crucial role in my growth as an experimental physicist. I take this opportunity to thank Rajesh, Priya, Onkar, Vaidehi, Ekata, Chinmay, Govind, Arvind, Anupama, Chinmai, Raj, Abhilash and many more for their timely help and encouragement. I would like to thank my friends from M.Sc. days Maithili, Arpan, Juzar, JD, Sayan, Naren, Aditya, Garima, Saima and the list goes on!

A big thank to my extended family members namely Aditee, Abhay, Mayuresh, Sandip and Chanda with whom I have shared best moments of my life; hanging around in
the city, malls, theaters and restaurants. I feel myself fortunate to have all these people around me.

I have great respect for teachers like Pawar sir, Khairnar sir and all those who taught me physics in college and kept me motivated in all those years for pursuing career in research.

This thesis is dedicated to all of them.
