Acknowledgements

At this long awaited moment of thanksgiving, I acknowledge my dependence on the blessings and beliefs of The Almighty, who understood my prayers even when I couldn't find the words to say them. His divinity has bequeathed me not the riches, but the spirit of reverence and perseverance.

I feel privileged to have reached this juncture where I can halt a little and think of the different people who have made the difference. Time has come for me to flow in thanksgiving, even though I may ebb in worth.

First and foremost, I express my gratitude to my esteemed supervisor, Professor Roopma Gandotra, Head, Department of Zoology, University of Jammu for introducing me to the vistas of fishery science and for providing such a good opportunity to carry out research work. Her profound knowledge and broad experience in the varied fields of fishery science, together with her friendly and understanding support, encouragement and guidance have been invaluable to me and essential for the completion of this work. The seemingly unending course leading to this thesis can drive anyone cynical but I am glad to have seen it through, largely because of her, as she never let any impediment go to my head. Her deep vision, the trenchant critiques, the probing questions, and remarkable patience deserve my gratitude the most. I believe that the highest appreciation is not to utter words, but to live by them, which I will. I will remain indebted, all my life to Professor Roopma Gandotra.

The only source of knowledge is experience and department of Zoology abounds in both. I gratefully acknowledge the kind support, encouragement and valuable advice of the epitomes of knowledge and experience, Prof. Kuldeep K. Sharma, Prof. J. S. Tara, Prof. Seema Langer, Dr. Sanjay Bhatia, Dr. Parvinder Kumar, Dr. Arti Sharma and Dr. Sarabeet Kour from Department of Zoology, University of Jammu. My heartfelt thanks are also due to Prof. D.N. Sahi and Prof. N.K. Tripathi, both of whom have attained superannuation recently.

The varied parameters covered under the present thesis demanded work to be accomplished in more than one laboratory. In addition to the larger proportion of work carried out in department of Zoology, University of Jammu, the Quality Analysis Lab. and Biotechnology Lab of Indian Institute of Integrated Medicine (IIIM) have played vital roles in completion of this thesis. The deep concern and timely help provided by scientific faculty there deserves my gratitude, so avidly, so ardently.

The timely and significant assistance rendered by all the non-teaching staff members of the department as and when needed, is highly appreciated and duly acknowledged. No research work can ever be completed without their help and as such I owe a part of my thesis work to all of them.

I’ll be failing in my duty if I don’t express my sincere thanks to the research scholars of all the labs of department of Zoology, viz., Fishery Research Lab, Entomology Research Lab, Wildlife Research Lab, Cytogenetics Research Lab and Human Genetics Research cum Counselling Centre. The help rendered by the scholars is duly acknowledged. The feeling of belongingness that I have for this department is largely due to the wonderful research scholars that I came across during the tenure of my research work.

I thank all of them for the homely atmosphere they have always provided. Inadvertently, I might have skipped acknowledging a few people but I extend my heartfelt thanks to all those who have helped, directly or indirectly during the compilation of my thesis.

My search for words may never end when it comes to acknowledge the love so instantaneous and forgiving, showered upon me by the truest friend I have. My mother, Mrs. Kanta
Andotra, has stood by me whenever trials heavy and sudden fell upon me; adversity took the place of prosperity and troubles thickened around me. I wish I could thank her for all that she has done for me. I take pride in my family and I shall not fail in penning down the same. My husband and the family of the in-laws have never failed to cause peace to return to my heart. Their love and support during this seemingly unending phase of testing times is proudly acknowledged.
I finish with remembering one soul who, having long merged into the colossal celestial sphere, still remains the most basic source of my life energy. I wish my grandfather could survive this day to see this thesis become a reality.
Payal Andotra
