ACKNOWLEDGEMENTS

I am feeling short of words to express my inner feeling of indebtedness to my beneficiaries. There is a big list of names to which I want to convey my heartfelt gratitude as they have been instrumental, helping and assisting in giving shape to my thesis in hand.

First and foremost I offer my sincerest gratitude to my supervisor, Dr. Ram Mehar, Assistant Professor, Department of Education, USOL, Panjab University, Chandigarh who has supported me in a number of ways throughout this work. His kind and affectionate guidance for this work cannot be expressed in words. It is an honour for me to have an opportunity to conduct a research under his supervision. One simply could not wish for a better or friendlier supervisor than him.

I would like to express my deep and sincere gratitude to my co-supervisor Dr. B.C. Josan, Principal D.A.V. College, Chandigarh. His understanding, encouraging and personal guidance have been of great value for me and provided a good basis for the present thesis. Looking back, I am surprised and at the same time very grateful for all I have received throughout these years. It has certainly shaped me as a person and has led me where I am now. All these years are full of such gifts given by him.

I am thankful as this thesis would not have been possible without the kind cooperation of principals and teachers of various schools of Abohar where I conducted my experiments. I am extremely thankful to the Department of Education, Panjab University, Chandigarh who has provided the support and equipment I have needed to produce and complete my thesis.

I extend my sincerest thanks to DAV College Managing Committee, New Delhi and Principal of DAV College of Education, Abohar for all their support and generous permission to conduct the research.

I am indebted to my friend and colleague Dr. Vijay Grover for his guidance in statistical analysis. His ideals and concepts have had a remarkable influence on my
entire career in the field of education and research. The support of my friend Anil Bishnoi cannot be ignored as he provided software and hardware services to use computer technology for this research. I am also thankful and feel pleasure in having loving students like Bikramjeet, Kamal and Ravi who helped me in conducting experiment and collection of data.

I want to express my appreciation to my parents for their love, understanding, patience, endless support and never failing faith in me.

A big thanks to my wife, without her I would be a very different person today and it would have been certainly much harder to finish a Ph.D. Her scientific background encouraged me to be more systematic and organised. The support by my loving kids Ifshita and Daksh with their understanding, endless patience and encouragement, when it was most required cannot be forgotten. They have lost a lot due to my research but provided a good environment to complete my writing up. Without their cooperation it would have been impossible for me to finish this work.

I am grateful to my nation India where one can enjoy his rights, especially right to education. It is her democracy that I started education from a small government primary school of a small village of Punjab and completed M.A. (Political Science & Punjabi); M.Ed. from a prestigious university like Panjab University, Chandigerh and now having the honour of writing the acknowledgements of Ph.D. thesis.

Finally, I offer my humble obeisance to the lotus feet of Almighty who blessed me through the support of above mentioned persons, endurance, faith and determination to pursue further and to bring my this dream into reality.

Lastly, I offer my regards and blessings to all of those who supported me in any respect during the completion of the project.
