ACKNOWLEDGEMENT

As a student of M.Sc. Statistics, my horizon was limited to the narrow domain of mathematical statistics. But, while working for my M.Phil dissertation under the guidance of Prof. O.P. Bagai, Deptt. of Statistics, Panjab University, Chandigarh, I got acquainted with other fields such as "Economic Inequality" and its measurement. The novelty of the topic and its further scope inspired me to pursue research in that very field. My interaction with Dr. A.C. Julka, Deptt. of Economics, Panjab University, Chandigarh, and his posers on the theme provided a strong enough motivation for a logical extension of my earlier work as a topic for Ph.D. thesis. Ready availbility of the Data pertaining to cultivating households of the Punjab provided an added incentive to carry out my work in the stated area and demonstrate its empirical application. Thus, what originated as a pure pursuit got fructified as an inter-disciplinary piece of research work in statistical theory and application in Agricultural Economics. As the work demanded my treading into various areas, I interacted several researchers and, naturally, gained in the process. Therefore, a word of acknowledgement is an affirmation of my gratefulness to all of them.

I, therefore, deem it a privilege to acknowledge my debt of sincere gratitude to my supervisors, Prof. O.P. Bagai and Dr. A.C. Julka, for their inspiring help, valuable
guidance and constant encouragement throughout my research work. I owe them a lot to help me understand certain concepts of Economics and Agriculture unfamiliar to me. Without their kind involvement the study would not have reached the finalised stage.

I also express my sincere thanks to my teachers, Dr. G.P. Mehta, Chairman of the Deptt. and Prof. Harshindar Singh, for valuable advice throughout my work and providing me with all the necessary administrative facilities. My thanks are also due to all my colleagues in the Deptt. for their kind cooperation and willing help.

I wish to thank sincerely Mr. Rajesh Anand, Computer Programmer in the Deptt., for his personal help and co-operation in preparing the programmes required for handling and analyzing the data.

My heartiest thanks are due to my friends and particularly to my family members - my husband and my son for their unlimited patience and providing me with the moral support much needed for the purpose.

In the end I thank Mrs. Darshan Kaur for taking a personal interest in typing this thesis.
