List of figures ................................................................. v
List of tables ................................................................. viii
Abbreviations ................................................................. ix
Acknowledgements ........................................................... xi
Abstract .............................................................................. xii

1. Introduction
   1.1 Healthcare scenario in India ........................................ 1
   1.2 Healthcare model in India ........................................... 5
   1.3 Agents and multi-agent system (MAS) ......................... 7
   1.4 Characteristics of MAS ............................................. 9
   1.5 Telemedicine Versus Multi-agent based Solution in Healthcare 10
   1.6 Applications of MAS ............................................... 12
   1.7 Conclusion ............................................................. 13

2. Review Of Related Research
   2.1 Medical Diagnostic Protocol ...................................... 15
   2.2 Multi-agent systems in Healthcare ............................ 20
   2.3 Multi-agent decision system using Probabilistic Network 23
   2.4 Multi-agent decision making based on Neural Networks  26
3. MASICC: Multi-Agent System For Infant And Child Care
   3.1 Introduction to the childcare problem 30
   3.2 MASICC: Multi-agent model for infant and child care 31
   3.3 Uncertainty in the selection of an agent 34
   3.4 Decision making techniques in multi-agent system 35
   3.5 Conclusion 46

4. Design Of A MAS System For Infant And Child Care
   4.1 Agent communication of MASICC 47
   4.2 Summary of notations 50
   4.3 Functional model of agent in urban areas 51
   4.4 Functional model of agent in rural areas 54
   4.5 Application Scenario 55

5. Functionality Of MASICC
   5.1 Designing Childhood Disease Ontology 59
   5.2 Agent Communication using Ontology 68
   5.3 Designing a probabilistic network based decision making system 74
   5.4 Designing decision making system based on neural networks 77
   5.5 Application Scenario 81

6. Implementation Of MASICC
   6.1 Agent Platforms 82
   6.2 Ontology Implementation 83
6.3 Implementation of agent at rural areas 86
6.4 Implementation of agent at urban areas 91
6.5 Verification of the system 97

7. Implementation And Validation Of Decision Making Techniques

7.1 Bayesian Network based Algorithm for Agent Selection 98
7.2 Validation of BN using Kolmogorov–Smirnov test 103
7.3 Algorithm using Neural Network to select Medical Specialist Agent. 106
7.4 Comparison of BN and NN techniques 111

8. Summary

8.1 Conclusions 113
8.2 Scope for future work 115
8.3 Research Contribution 117

References 118-127

Appendices

Appendix A: Definition of sign-symptoms 128
Appendix B: Definition of Super Specialist Doctors 132
Appendix C: Tools and Specifications Used in the Implementation

i. Java 133
ii. Jade 135

iii. GeNIe & SMILE 138

iv. MATLAB 140

v. FIPA 142

Appendix D: Data used in Neural Networks 146
