Villages should become self sufficient & self dependent in all respects

Urban areas over ride rural areas and utilize their resources. As per my scheme, commodities, which are manufactured better in villages, will not be allowed to be manufactured in cities. Instead, cities will be advantage us to be the distribution centers. Protection of villages from their miss use will bring move life to them. Commodities produced on large scale in villages are under the cage of commercial competition & directly or indirectly it is responsible to deceive villages.

Therefore sincere efforts to make villages self reliant & self dependent are needed. To satisfy local needs commodities should only be produced in villages. Cottage industries should be protected. Let the villages make use of ultra modern machines & equipments. However the only condition is enforced that it should not allow deceiving others by using it.
