LIST OF FIGURES

Figure 1  Scanning electron micrograph of *Bacillus* GK 8
Figure 2a  *Bacillus* GK 8 showing zone of hydrolysis on 1% tributyrin plate
Figure 2b  *Bacillus* GK 8 showing zone of hydrolysis on 1% olive oil plate
Figure 3  Growth curve and lipase production by *Bacillus* GK 8 with glucose as the carbon source in shake flask culture at pH 8.0 and 30°C
Figure 4  Effect of non-lipidic carbon sources (carbohydrates) on growth and lipase production
Figure 5  Effect of lipidic carbon sources (oils) on lipase production
Figure 6  Effect of nitrogen sources (organic and inorganic) on the growth and lipase production
Figure 7  Effect of sodium chloride concentration on growth and lipase production
Figure 8  Effect of various surfactants (0.5% conc.) on lipase production
Figure 9  Comparative lipase production with olive oil (0.5%) and Tween-80 (0.5%) in production medium.
Figure 10  Effect of fatty acids (0.2%) on growth and lipase production
Figure 11  Lipase production using different agro by products
Figure 12  Effect of different supplements in wheat bran on lipase production
Figure 13  Effects of salts in combination with wheat bran on lipase production
Figure 14  Lipase production in wheat bran extract and with supplements
Figure 15  (a) Surface attachment of *Bacillus* GK 8 to the solid substrate (wheat bran)  
(b) Sporulating stage of *Bacillus* GK 8 attached to solid substrate (wheat bran) after 96 h
Figure 16  Elution profile of lipase on Q-Sepharose column
Figure 17  Elution profile of lipase on Phenyl-Sepharose column
Figure 18  Native-PAGE analysis of purified lipase
(a) Coomassie Brilliant Blue staining  
(b) Activity staining (esterase) of purified lipase
Figure 19  SDS-PAGE analysis of purified lipase
Figure 20  Elution profile of native lipase on Sephadex G-150 column
Figure 21  Native-PAGE analysis of purified lipase (Proteolytic products, storage of supernatant for 2 days at 4°C)
   (a)  Coomassie Brilliant Blue staining
   (b)  Activity staining (esterase)
   (c)  Zymogram showing bands of hydrolysis on tributyrin as substrate

Figure 22  Native-PAGE analysis of purified lipase (Proteolytic product, storage of supernatant for a week at 4°C)
   (a)  Coomassie Brilliant Blue staining
   (b)  Activity staining (esterase)
   (c)  Zymogram showing band of hydrolysis on tributyrin as substrate

Figure 23  Elution profile of low molecular weight lipase on Sephadex G-150 column

Figure 24  Effect of pH on lipase activity at 45°C.

Figure 25  Effect of temperature on lipase activity at pH 8.0

Figure 26  Effect of metal ions/salts (10mM) on lipase activity

Figure 27  Effect of organic solvents (10% v/v) on lipase activity

Figure 28  Effect of various surfactants (0.1%) on lipase activity

Figure 29  Effect of pH on stability of lipase after one hour

Figure 30  Effect of temperature on stability of lipase

Figure 31  Shelf-life of partially purified lipase at 35°C and 4°C

Figure 32  Effect of organic solvents (30% v/v) in stability of lipase

Figure 33  Thin Layer Chromatography of purified lipase

Figure 34  Lineweaver-Burke Plot

Figure 35  Thermal inactivation of aqueous and immobilized lipase

Figure 36  Effect of detergent ingredients on lipase activity

Figure 37  Lipase activity in presence of various commercial detergents
