# LIST OF FIGURES

| Figure 1-1: | Typical Solid Rocket Motor | 3 |
| Figure 1-2: | Schematic Diagrams of TVC Mechanisms | 4 |
| Figure 1-3: | Typical Flex Nozzle System | 10 |
| Figure 1-4: | Typical Flex Seal | 11 |
| Figure 1-5: | Nomenclature of Flex Seal | 12 |
| Figure 2-1: | Typical Joints in Large Rocket Motors | 50 |
| Figure 3-1: | Flex Nozzle Configuration-D | 52 |
| Figure 3-2: | Flex seal design configuration-D | 55 |
| Figure 3-3: | Stress correction factor related to cone angle [40] | 60 |
| Figure 3-4: | Correction factor, $K_m$ related to motor chamber pressure [44] | 61 |
| Figure 3-5: | Buckling stress of reinforcements as a function of reinforcement dimensions and properties [40] | 62 |
| Figure 3-6: | Shims 1 to 7 - Configuration - D | 65 |
| Figure 3-7: | Fore end Ring - Configuration - D | 66 |
| Figure 3-8: | Aft end Ring - Configuration – D | 67 |
| Figure 3-9: | Flex seal with thermal boot, configuration -D | 70 |
| Figure 3-10: | Flex seal sub-assembly - Configuration - D | 71 |
| Figure 3-11: | Throat Housing - Configuration - D | 73 |
| Figure 3-12: | Intermediate dome - Configuration - D | 74 |
Figure 3-13: Dynamic Envelope - Configuration - D ..................... 78
Figure 3-14: Flex nozzle interfaces - Configuration - D ............... 81
Figure 3-15: Realised Flex seal ............................................. 92
Figure 3-16: Realised Flex nozzle ......................................... 92
Figure 3-17: Flex nozzle system development methodology .......... 93
Figure 4-1: Tensile test specimen - elastomer ......................... 96
Figure 4-2: QLSS test specimen- elastomer ........................... 97
Figure 4-3: Stress Vs Strain for Tensile Test Specimen – Elastomer ............................................. 97
Figure 4-4: Stress Vs Strain for QLSS Specimen - Elastomer ...... 98
Figure 4-5: Tensile Test Specimen - Reinforcement ................... 99
Figure 4-6: Stress vs. Strain curve for tensile tests - Reinforcement ........................................................................ 100
Figure 4-7: Comparison of Material Models ............................... 102
Figure 4-8: Mooney Rivlin Constants for Elastomer .................. 104
Figure 4-9: Two Parameter Mooney Rivlin Model ...................... 105
Figure 4-10: FE model of the QLSS specimen .......................... 107
Figure 4-11: Displacement plot in a QLSS specimen ................. 107
Figure 4-12: Comparison of FEA predictions and Experimental Results for a QLSS Specimen .......................... 108
Figure 5-1: CAD model of flex seal – load case-1 ...................... 111
Figure 5-2: Finite Element model with loading and Boundary Condition – case-1 ............................................... 112

Figure 5-3: CAD model of flex seal – load case – 2 & 3 ............... 113

Figure 5-4: FE model with loading and boundary condition – load case-2 & 3 ................................................................. 114

Figure 5-5: Seal compression plot of flex seal – load case - 1 ...... 120

Figure 5-6: Hoop stress plot of flex seal – load case – 1 ............. 121

Figure 5-7: Hoop stress plot of flex seal – load case - 2 ............ 122

Figure 5-8: Hoop stress plot of flex seal – load case - 3 ............ 123

Figure 5-9: CAD model of flex seal with thermal boot ............. 134

Figure 5-10: FE model of flex seal with thermal boot ............ 135

Figure 5-11: Deformed shape of flex seal with thermal boot ....... 136

Figure 6-1: Developmental test plan for flex seal tests. .......... 140

Figure 6-2: Typical Strain Gauge Plan ..................................... 145

Figure 6-3: Instrumentation setup for acceptance test of flex seals .................................................................................. 146

Figure 6-4: Proof pressure test set-up drawing (Configuration-A). 149

Figure 6-5: Null position & Vectoring test set-up drawing (Configuration-A) ............................................................... 150

Figure 6-6: Vectoring test set-up with instrumentation (Configuration-A) ................................................................. 150
Figure 6-7: Vectoring test set-up with instrumentation (Configuration-B) .......................................................... 151

Figure 6-8: Vectoring test set-up with instrumentation (Configuration-C) .......................................................... 151

Figure 6-9: Proof Pressure test set-up with instrumentation (Configuration-D) .......................................................... 152

Figure 6-10: Vectoring test set-up with instrumentation (Configuration-D) .......................................................... 152

Figure 6-11: Vectoring test set-up with instrumentation (Configuration-E & F) .......................................................... 153

Figure 6-12: A typical Integrated test set-up drawing ...................... 154

Figure 6-13: A typical realised Integrated test set-up...................... 154

Figure 7-1: Seal compression versus pressure – Hysteresis behavior ........................................................................ 159

Figure 7-2: Comparison of seal compression from test data with FEA prediction ......................................................... 160

Figure 7-3: Comparison of hoop stress in mid shim from test data with FEA prediction ..................................................... 161

Figure 7-4: Variation of hoop stress vs. angle during simultaneous vectoring test within mid shim ......................... 170

Figure 7-5: Hoop stress vs. vectoring angle during loading from +40 to -40 simultaneous vectoring test ......................... 171
Figure 7-6: Variation of actuator force vs. vectoring angle ............... 172

Figure 7-7: Actuator force (Pitch) versus angle compared with FEA predictions for three flex seals. ......................... 173

Figure 7-8: Seal torque with and without boot........................... 174
