LIST OF FIGURES

2.1 Examples of Asian noodles produced from wheat flour as basic ingredient (a) egg noodles (b) somen (c) udon (d) instant noodles 8
2.2 Examples of Asian noodles produced from basic ingredients other than wheat flour (a) rice noodles (b) rice vermicelli (c) bean threads (d) soba 9
2.3 Basic unit operation involved in processing of different noodles (Kim 1996b) 10
2.4 Consumption of instant noodles in world in recent years (WINA 2011) 12
2.5 Consumption of instant noodles in different countries (data figures represents 100 million packets; plotted using data from WINA (2011)) 13
2.6 Consumption of instant noodles in India (WINA 2011) 13
2.7 Processing and classification of instant noodles 14
3.1 Instrument used for physical analysis of grains: Aqua-TR for determination of moisture content and hectoliter weight (left); Single Kernel Characterization System for analyzing hardness, kernel width, moisture content and kernel weight (right) 35
3.2 Falling number apparatus 37
3.3 Mixolab 39
3.4 Graph obtained using Mixolab 39
3.5 Glutomatic instrument for gluten determination 41
3.6 Flow chart for the isolation of wheat starch 44
3.7 Scanning electron microscope 46
3.8 Monitoring the quality of frying oil using Testo 270 (deep-frying oil tester) 51
4.1 Mixolab profile of the wheat flour 59
4.2 Effect of (a) alkaline salt and water absorption (b) guar gum and alkaline salt on oil uptake of instant noodles 62
4.3 Response surface plot for the effect of (a) water absorption and alkaline salt on cooked weight (b) salt and guar gum on the cooking loss of cooked instant noodles 63
4.4 Effect of (a) alkaline salt and water absorption (b) guar gum and alkaline salt on the hardness of cooked instant noodles 64
4.5 Effect of (a) guar gum and water absorption (b) salt and alkaline salt on overall acceptability score of instant noodles 65
5.1 Effect of processing variables (a) dough sheet thickness and mixing time (b) frying time and frying temperature on oil uptake of instant noodles 72
5.2 Effect of processing variables on the cooking quality of instant noodles 74
## LIST OF FIGURES

5.3 Effect of processing variables (a) frying time and steaming time on hardness (b) frying time and dough sheet thickness on overall acceptability of instant noodles

6.1 Thermomechanical characteristics of good (DBW 16, WH 542) and poor (HW 2004, WH 1021) noodle making wheat varieties

7.1 SDS-PAGE patterns of total glutenins extracted from different wheat varieties. The lanes represents: M- Marker, 1- PBW 550, 2- PBW 443, 3- HW 2004, 4- WH 283, 5- WH 711, 6- WH 147, 7- HS 490, 8- WH 1021, 9- C 306, 10- PBW 373, 11- HI 977, 12- DBW 16, 13- WH 542, 14- PBW 343 and 15- WH 1025

7.2 Photograph of noodles showing lesser yield obtained for a) HW 2004 b) DBW 16

7.3 Surface appearance of (a) good (DBW 16) and (b) poor noodles (WH 1021)

7.4 SEM images of internal structure of instant noodles prepared from good noodle varieties (DBW 16 and WH 542) and poor noodle varieties (HW 2004 and WH 1021)

8.1 SEM images for starch granules isolated from (a) DBW 16 and (b) HW 2004

8.2 Thermograms of starches isolated from good (DBW 16, WH 542) and poor (HW 2004, WH 1021) noodle making wheat varieties

8.3 Starch pasting profiles for good (DBW 16, WH 542) and poor (HW 2004, WH 1021) noodle making wheat varieties

8.4 Dough pasting characteristics of good (DBW 16, WH 542) and poor (HW 2004, WH 1021) noodle making wheat varieties

9.1 RAPD banding profile of wheat genotypes with primer no. 1 (Lanes 1-17 M- 1 kb DNA ladder; 1-WH 711, 2- WH 1021, 3- WH 1025, 4- C 306, 5- PBW 343, 6- WH 147, 7- PBW 550, 8- HI 977, 9- HW 2004, 10- WH 542, 11- DBW 16, 12- HS 490, 13- PBW 373, 14- PBW 443, 15- WH 283, M- 100bp DNA ladder)

9.2 Dendogram constructed using UPGMA clustering method

9.3 Clustering pattern of 15 wheat varieties based on physical characteristics

9.4 Clustering pattern of 15 wheat varieties based on flour protein characteristics

9.5 Clustering pattern of 15 wheat varieties based on starch quality characteristics

9.6 Clustering pattern of 15 wheat varieties based on noodle quality characteristics
