"You cannot teach a man anything, you can only help him discover in himself"

Gallileo

This thesis is the end of my journey in obtaining my Ph.D. Though only my name appears on the cover of this thesis, a great many people have contributed to its production. It is the support and encouragement of numerous people including my well wishers, my friends, colleagues and various institutions that kept the thesis on track and finally has been seen through to completion. At the end of my thesis I would like to thank all those people who made this thesis possible; it is a pleasing task to express my gratitude to all those who contributed in many ways to the success of this study and made it a remarkable experience for me.

My first debt of gratitude must go to my advisor Dr. Sridhar Sivasubbu, for his excellent guidance, care, patience, motivation and providing me with an excellent atmosphere for doing research. His continuous guidance, encouragement and valuable suggestions during the tenure of my research and writing this thesis have given me the support to complete the thesis. It is his guidance that brought confidence in me not only in the research life but also in my personal life and thereby moulding me into a stronger self as well as a good planner. His insightful comments and constructive criticisms at different stages of my research were thought-provoking and they helped me focus my ideas. I am grateful to him for holding me to a high research standard and enforcing strict validations for each research result. Being one of his initial students I am very fortunate to learn the skills of performing experiments directly from him as he himself used to work on the workbench. I am greatly thankful to him for providing me the freedom to plan my experiments and allowing me to learn from my mistakes. He has always stood by me during the low times of my life and encouraged me to sail through them smoothly. Apart from science, he has spent a lot of time with me discussing life beyond science and helping me to take the right decisions. I would like to take this opportunity to thank him for everything.

This thesis would not have been possible without the help, support and patience of Dr. Vinod Scaria. He has been both a good advisor as well as a friend at the same time. His presence and sagacity has been invaluable for both the academic and my personal endurance for which I am extremely grateful. He patiently provided the vision, encouragement and advice necessary for me to proceed through the doctoral program and complete my thesis. It is his continuous support that helped me learn the computational biology. During my initial days of Ph.D, I was an inerudite to computational language; however it was his effort that now when I am writing this thesis I can handle all the computation related analysis myself. Apart from this, he is one of the best
companions of mine for the life outside the laboratory. The outings and trips initiated by him refreshed me to perform the experiments with renewed energy.

I would also love to take this opportunity to thank Mrs. Meenakshi Sridhar, for her great hospitality and the help she extended in completing the thesis. I am greatly indebted to her for correcting the grammatical and spelling mistakes of the thesis.

I am deeply gratified to the insightful discussions provided by Dr. Beena Pillai throughout my tenure at IGIB. It was she who opened the door of IGIB for me to enter. I first contacted her during my M.Sc days and during my initial days she provided a great support. As a member of my PhD advisory committee, she always supported me whenever required. I am also thankful to the other two member of my PhD advisory committee, Dr. Souvik Maiti and Dr. Shantanu Sengupta, for their guidance and advices.

While the faculty members helped me with guidance and advices to solve the research problems, my labmates provided me the environment to enjoy my work. I wish to thank all my present and past lab members starting with Tapatee, Shabda, Sunny, Rajeshwari, Ramcharan, Gaurav, Chaitali, Allen, Rajendra, Jayant, Prateek, Ruby, Ramya, Rajiv, Vinod, Natya, Ashish, Soundar, Meenakshi and others. Tapatee and Shabda were the first colleagues cum friends of mine at IGIB and they made my initial days really wonderful. I am also thankful to Rajendra for taking the responsibility of Zebrafish facility, thereby freeing my time to invest in the next generation sequencing platform. Ramya joined as a next generation sequencing analyst and along with Vinod, she was the one who helped me in learning bioinformatics for which I am grateful to her. I am also thankful to the junior-most members of our lab Kriti, Subburaj, Samshuddin, Elvin for making the final days of my PhD full of happiness and also closing all my pending jobs. Apart from them there were many trainees of the lab also who includes Vineeta, Shashi, Harinder, Rishi, Sukhshant, Saurav, Anupama, Purnima, Priyadarshini, Mandeep, Shiveta, Joe who helped me in many other ways. I am thankful to them too.

I want to give my special thanks to two of my friends without whom I think I would have not finished my PhD. Both of them supported me in my most difficult times, one during the initial days of PhD and other one during the final days of PhD. I am greatly indebted to Ajay Deepak Verma and Meghna Singh. Ajay joined the lab one month prior to me and he helped me with useful discussion and support whenever required. Meghna, though junior to me, provided me the strength to stand during my critical days. I am greatly thankful to both of them. They have helped me stay sane through these difficult years. Their support and care helped me overcome setbacks and stay focused on my graduate study. I greatly value their friendship and I deeply appreciate their belief in me.
I also wish to thanks all other friends of IGIB. I am thankful to Saakshi, Vinita, Malobi for making every day enjoyable while the writing of the thesis was going on. Helps I received from Vinita during the genome sequencing data analysis and from Saakshi during the RNA sequencing data analysis is greatly acknowledged. I am also thankful to Deeksha, Sourabh, Ayesha, Salmi, Kandarp, Satish for helping me whenever required. It was great fun to work with Sourabh. Sourabh, being a Master in Computer Application, was the first name that I enunciated whenenevr I got stuck in some analysis or whenever my computer started giving some error. Satish always helped with various scientific propositions from time to time. He helped in correcting my writing by providing useful scientific inputs. I also want to thank Rhishikesh, Reema, Kartik, Tanay, Niti, Soma, Amit, Monoban, Ashwani, Shivani, Mohit, Zainab, Shrutu, Bibhuti, Gaurav, Shamini, Abhiranjani, Abhijit, Deepak, Atul, Parvez, Rakesh, Bharat, Dilip, Sandip, Aravind, Simone, Meenal, Yasha, Manoj, Brijendra, Archana and all other friends who directly or indirectly helped me during my PhD. Rhishikesh helped me in nucleosome and gene expression study. It was really fun to work with him. Simone used to sit next to me during my initial days and always helped me with useful advices.

At this moment of accomplishment, I pay homage to my friend, Late. Dr. Jasmine Ahluwalia. She always used to help me with her guidance, support and encouragement. It’s really unfortunate that today she is not with us.

During this work, I have collaborated with many colleagues outside IGIB for whom I have great regards, and I wish to extend my warmest thanks to all those who have helped me with my work. I am thankful to Dr. Stephen C. Ekker, Dr. Eric W Klee of Mayo Clinic and Dr. Matthew D. Clark of Wellcome Trust Sanger Institute.

I extend my warm gratitude to CSIR for supporting me financially through senior research fellowship and also to the FAC002 grant for providing the experimental infrastructure. I am also thankful to APDBN for funding my travel to South Korea to deliver a scientific talk and also to CSIR for funding me to go to Dubai for presenting my data at HUGO. I would also like to thank all the friends and scientist whom I met during different conferences, workshop or meeting, as discussions with them helped me enrich my knowledge.

I thank IGIB for providing a good and supportive working environment to perform research work. I wish to thank scientist at IGIB: Dr. Rajesh Gokhle, Dr. K. C. Gupta, Dr. Chetana Sachidanandan, Dr. Bhupesh Taneja, Dr. Mitali Mukherjee, Dr. Debashish Dash, Dr. Dwarpayan Bharadwaj and others. I also want to thank the administrative staff of IGIB. I am thankful to Vishal, B. R. Gupta, Khemraj, Vikash Pandey, Dr. Naresh Singh, P. C Chaddha and all others. They helped in carrying out all the administrative work smoothly and also maintained all the machines in my lab so efficiently that I never had to worry about malfunctioning of
machines, losing files, creating backups or installing software. I do not envy their job. I feel that they are the greatest system administrators and lab care-takers in the world.

Last but not least, I would like to thank my parents for their unconditional support, throughout my PhD. None of this would have been possible without the love and patience of my family. In particular, the patience and understanding shown by my maa, deuta, baidew and tutu during the PhD years is greatly appreciated. They have been a constant source of love, concern, support and strength all these years. I would like to express my heart-felt gratitude to my family. To them I dedicate this thesis.

Ashok Patowary
