1.11.3. Immobilization ................................................................. 28
Outline of the problem ............................................................... 29
Present Investigation ................................................................. 30

2. Materials and methods ....................................................... 31
  2.1. Efficiency of denitrification in denitrifying reactor of GNFC (DNR) 31
  2.2. Enumeration of denitrifiers from DNR samples ...................... 31
  2.3. Composition of nitrate containing effluent of GNFC ............... 31
  2.4. Analytical methods ......................................................... 32
  2.5. Isolation of denitrifiers ....................................................... 32
    2.5.1. Isolation of denitrifiers from DNR .................................. 32
    2.5.2. Isolation of denitrifiers from cow dung .......................... 32
      2.5.2.1. Composition of Molecular Hydrogen Nitrate Medium ... 33
      2.5.2.2. Composition of Nitrate agar medium .......................... 33
    2.5.3. Isolation of denitrifiers by column enrichment technique .... 33
      2.5.3.1. Static column ....................................................... 33
      2.5.3.2. Percolation column ................................................. 34
  2.6. Confirmation of denitrifiers ............................................. 34
  2.7. Effect of temperature on consortium of Pseudomonas stutzeri and
       Comamonas testosteroni ................................................... 35
  2.8. Effect of different carbon sources on denitrification efficiency .. 37
  2.9. Effect of hydrogen ion concentration (pH) on denitrification
       efficiency of consortium .................................................. 37
  2.10. Influence of dissolved oxygen on denitrification ................... 37
  2.11. Yeast extract requirement for removal of nitrate from wastewater .. 38
  2.12. Inoculum optimization in batch experiment .......................... 38
  2.13. 4 and 50 l Bioreactor studies ........................................ 38
    2.13.1. Calculation for specific denitrifying activity and denitrification
           efficiency (%) .............................................................. 39
  2.15. Cell immobilization procedure ........................................ 40
  2.16. Immobilized and free cells denitrifying activity ................... 40
  2.17. Beads stability ............................................................ 41
  2.18. Continuous operation of Bioreactor ................................... 41

3a. Isolation, Identification and characterization of denitrifying bacteria. 42
  3a.1. Efficiency of denitrification in denitrifying reactor (DNR) ...... 44
  3a.2. Enumeration of denitrifiers from DNR samples ..................... 45
  3a.3. Isolation of denitrifiers ............................................... 47
    3a.3.1. Isolates obtained from DNR samples ............................. 47
    3a.3.2. Isolates obtained from cow dung .................................. 47
    3a.3.3. Isolates obtained by enrichment techniques .................... 48
      3a.3.3.1. Percolation Column .......................................... 48
      3a.3.3.2. Static Column .................................................. 49
  3a.4. Screening of denitrifiers .............................................. 51
3a.5. Confirmation of denitrifiers ........................................... 55
3a.6. Identification of isolates 1-4 and 1-5 ..................................... 60
3b. Optimization studies of denitrification process parameters ......... 62
  3b.1. Effect of temperature on denitrification by consortium of
        *Pseudomonas stutzeri* and *Comamonas testosteroni* .......... 62
  3b.2. Effect of different carbon sources on denitrification efficiency .... 64
  3b.3. Effect of hydrogen ion concentration (pH) on denitrification 
        efficiency of consortium .................................................. 67
  3b.4. Influence of dissolved oxygen on denitrification .................. 69
  3b.5. Yeast extract requirement for removal of nitrate from wastewater .. 70
  3b.6. Inoculum optimization in batch experiment ......................... 72
4. Biotreatment of nitrate-rich effluent by suspended growth technique 
   in 4 & 50 l bioreactor .......................................................... 73
  4.1. Nitrate removal by suspended growth technique in continuous 4-L 
       Bioreactor ................................................................. 74
     4.1.1. Performance of the bioreactor at different HRTs (96h & 66h) 
            with same COD:NO$_3^-$-N ratio (3.45) ......................... 75
     4.1.2. Performance of the bioreactor at lower COD:NO$_3^-$-N ratio(2.85) 77
  4.2. Scale-up of the system: Removal of nitrate in a continuous reactor at 
       50 l ................................................................. 79
     4.2.1. Nitrate removal at flow rate 100h HRT (12 l d$^{-1}$) with 
            COD:NO$_3^-$-N; 3.45 ........................................... 82
     4.2.2. Denitrification efficiency at 66h HRT (flow rate 18 l d$^{-1}$) and 
            50h HRT (24 l d$^{-1}$) with COD:NO$_3^-$-N;3.45 ................ 83
     4.2.3. Denitrification efficiency at retention time of 44h with 
            COD:NO$_3^-$-N; 3.45 (flow rate 27 l d$^{-1}$) .................... 87
  4.3. Effect of lower organic load (COD:NO$_3^-$-N;2.85) on denitrification 
       with various flow rates (18 l d$^{-1}$ and 25 l d$^{-1}$) .......... 88
5a. Optimizing growth and nitrate removal kinetics and process design 
    parameters for suspended growth technique in a pilot scale reactor. 93
  5a.1. Process design considerations .......................................... 93
  5a.2. Aerobic treatment studies in continuous reactor .................... 94
  5a.3. Kinetics of biological denitrification, as applied in continuous 
        complete-mix-no recycle system ......................................... 96
  5a.4. Determination of kinetic coefficients for denitrification. 98
  5a.5. Optimization of different HRTs with 2.85 COD:NO$_3^-$-N ratio at 1.5 
        m$^3$ pilot reactor .......................................................... 99
  5a.6. Denitrification efficiency with different HRTs at 2.45 COD:NO$_3^-$-N 
        Ratio ........................................................................ 104
  5a.7. Comparative studies of pilot scale denitrifying reactor and DNR of 
        GNFC
     5a.7.1. Comparison of volumetric COD and NO$_3^-$-N loading rates ... 109
     5a.7.2. Comparison of dissolved oxygen concentration and pH .......... 110
     5a.7.3. Comparison of Volatile Suspended Solids (X$_{DN}$) .......... 111
