ACKNOWLEDGMENT

The author recalls with pleasure his first meeting with Dr. K.C. Misra, Ph.D.,(Sask), Reader, Department of Botany, Banaras Hindu University, Varanasi, and his hypnotic influence which led to the author's initiation into the field of ecology. The idea of the study of the grassland ecosystem was originally implanted into the author's mind by Dr. Misra. But the concept of the present study (Ecological Studies of Grasshoppers in the Grassland Ecosystem) was groomed and nurtured by Dr. A.N. Chatteraj, M.Sc.,D.Phil., F.R.E.S., F.E.S.I., F.N.A.,Sc., Reader, Zoology Department, Allahabad University, under whose supervision the entire work was carried out at the laboratory of the Department of Zoology, C.M.D. Post-Graduate College, Bilaspur.

The author takes this opportunity to express his deep debt of gratitude which he owes to Dr. A.N. Chatteraj, M.Sc., D.Phil., F.R.E.S., F.E.S.I., F.N.A., Sc., for his kind and keen interest in the work and his continuous guidance, pertinent criticisms and valuable suggestions during the progress of the work. He also placed his personal library at the disposal of the author for which the latter is deeply indebted to him. He also wishes to record his special gratitude to Dr. Mrs. B.K. Chatteraj, M.S., D.Phil. for extending her affectionate cooperation during the correction of the manuscript.
The author feels grateful to Dr. D.R. Shukla, M.A., Ph.D., Principal, C.M.D. Post Graduate College, for providing laboratory and library facilities for the present work. The author would have never been able to face the task of evaluating the energy values of the grasshoppers without the help, extended by Sri B.S. Deshmukh, Officer-in-Charge, Coal Survey Laboratory (C.S.I.R.) Bilaspur, and his collaborator Sri B.L. Shah, to whom the author is indebted.

The author's gratefulness is also due to Dr. S. Khaw, Director, Ecological Survey of India, Calcutta, for prompt identification of the experimental insects by him; to Dr. P.D. Srivastava, Senior Entomologist, Indian Agricultural Research Institute, New Delhi, for his help in the preparation of thesis; to the Librarian, I.A.R.I., New Delhi for his help in allowing the author to use the Institute Library, and to stay at the Institute campus.

To Dr. A.M. Agrawal, Department of Botany, C.M.D. Post Graduate College, Bilaspur, and Dr. A.K. Bansal, Government Science College, Raipur, who allowed the author, to use some data of their thesis, for establishing certain community interrelationships; and to Dr. S.C. Srivastava who was a great help during statistical interpretations.

To Dr. R. Misra, P.N.I., U.G.C. Professor at the International Institute of Tropical Ecology, Banaras Hindu University, Varanasi, for his valuable suggestions and
encouragements at times; and Dr. Frank D. Colley, Director, 
Institute of ecology, University of Georgia, U.S.A., for providing 
the reprints on secondary production and energy flow.

The author would be failing in his duty of acknowledging 
the indebtedness and appreciations without mentioning the name 
of Dr. V.C. Srivastava, M.Sc., D.Phil., and his entire family, all 
of whom were not only a constant source of help but also encourage-
ment during the various stages of this work. Particular mention 
must be made of the appreciative help and strenuous efforts made 
by Dr. Srivastav during the last stage of completion of the 
thesis, who, along with author, kept burning the midnight oil 
to complete the type script.

The partial financial assistance received during the 
course of the present study from the Ravishankar University, 
Raipur, is also acknowledged.

In the end, the present study is an outcome of the 
blessings of my revered parents and silent encouragements from 
my wife Gita, to all of whom I am much indebted.

Department of Zoology, 
C.M.D. Post Graduate College 
Bilaspur, M.P.

Dated, 1.3.77. 

(K.P. DUVVEDI)
