ACKNOWLEDGEMENTS

I am profoundly indebted to Dr. A.K. Mahalanabis, Professor in Electrical Engineering at Indian Institute of Technology, New-Delhi for his invaluable guidance all throughout the period of investigations, 1974-'79. He not only introduced to me with the vast scope of applications of Popov type stability conditions in electrical machine analysis but has been a constant source of supervision and inspiration.

I owe a debt of gratitude to Dr. B. Thapar, Professor and Head, Electrical Engineering Department at Punjab Engineering College, Chandigarh for his supervision, keen interest and constant concern about the progress of this work.

I have also to put on record my regards and sincere thanks to Dr. O.S. Sehgal, Principal of Punjab Engineering College, Chandigarh for his help and encouragement. I am greatly indebted to the Chandigarh Administration for extending partly the financial assistance to support this work.

I am thankful to my fellow researchers specially Mr. Ramanand Singh for some valuable discussions and useful suggestions.

I am very thankful to my wife for her patience and understanding.

Last, but not least, my thanks are due to Mr. Harish Bhatia for patiently and skillfully type-cutting the stencils and Mr. Lal Singh for carefully cyclostyling.

Chandigarh

(RAMESHWAR JHA)
