ACKNOWLEDGMENTS

This thesis is based on my last 4 years work done in the Department of Mathematics, Manipur University. Since joining the Department of Mathematics as a research scholar, Professor K.S. Bhamra has been supervising my research work. At the outset I very earnestly thankful to him for suggesting such an interesting topic from the galaxy of many ones, which are thoroughly enjoyed during the years. His critical comments and important suggestions were a great source of inspirations and will bear fruit for decades.

I am also rendering my thankfulness to Dr. Ng. Ibohal Singh, Associate Professor, Head, Department of Mathematics, M.U. for extending all sorts of help during my research work.

I must thank Mr. A. Ingocha Singh, research scholar for extending valuable helps and his association with me during my work.

My sincere thanks belong also to my colleagues in the Department of Mathematics, D.M. College of Science for supporting me and letting me share during the last decades. And I specially thank Dr. L. Gopal Sharma for his moral support and encouragements during my research work.

I also express my sincere gratitude to my beloved elderly friend Shri M. Ibohal Singh for his constant support and valuable advices.

I would like to thank all my relatives, especially my father, mother and brothers, for being interested in subjects that are not always very easy to understand.

There is also a very special person I had like to finally thank, my wife H. Amita, who has had the patience to stand beside me and has helped all that work to become reality.

Thoudam Roshan Singh
