LIST OF TABLES

3.2.1. Measurement of toxic effect of acetone crude bark extract of Pajanelia longifolia (Willd.) K. Schuman on serum biochemical parameters ........................................ 38

3.2.2. Measurement of toxic effect of methanol crude bark extract of Pajanelia longifolia (Willd.) K. Schuman on serum biochemical parameters .................. 42

3.3.1. Protective effect of Pajanelia longifolia (Willd.) K. Schuman on serum biochemical parameters against CCl₄ induced hepatotoxicity in Swiss albino mice ......................................................................................... 47

3.3.2. % of Hepatoprotection offered by different crude extracts of Pajanelia longifolia (Willd.) K. Schuman at different dose concentration manner on serum biochemical parameters against CCl₄ induced hepatotoxicity in Swiss albino mice ......................................................................................... 48

3.4.1. Antioxidant efficacy of Pajanelia longifolia (Willd.) K. Schuman on tissue enzymatic and non enzymatic levels of Swiss albino mice against CCl₄ induced hepatic damage ......................................................................................... 51

4.1.2. Methodology followed for preliminary phytochemical screening........ 57

4.1.3. Preliminary Phytochemical screening of Pajanelia longifolia (Willd.) K. Schuman .............................................................................................................. 58

5.2.1. Protective effect of 2,3,6-trimethyloct-6-enal on serum biochemical parameters against CCl₄ induced hepatotoxicity in Swiss albino mice ....................... 75

5.2.2. % of Hepatoprotection offered by 2,3,6-trimethyloct-6-enal at different dose concentration manner on serum biochemical parameters against CCl₄ induced hepatotoxicity in Swiss albino mice ......................................................................................... 76

5.3.1. Antioxidant efficacy of 2,3,6-trimethyloct-6-enal at different dose concentration manner on tissue enzymatic and non-enzymatic levels of Swiss albino mice against CCl₄ induced hepatic damage ......................................................................................... 79
