The satisfaction that accompanies the successful completion of any task would be incomplete without the mention of the people who made it possible, whose constant guidance and encouragement crown all the efforts. An understanding of the study like this, is never the outcome of the effort of a single person, rather it bears the imprint of a number of people who directly or indirectly helped me in partial fulfillment of this project. I would be failing in my duty if I don’t say a word of thanks to all those people.

First and foremost I would like to thank Dr. B S Sohi, Ex-Director UIET Chandigarh, who accepted me as his student for my PhD dissertation work. He blessed me with supervision, advice and guidance from the very early stage of this research as well as giving me extraordinary experiences throughout the work. A teacher, with an extraordinary skill to make one understand the toughest of the tough concepts as if they were things forgotten, his truly scientific intuition has made him as a constant oasis of ideas and passions in science, which exceptionally inspired and enrich my growth as a student, a researcher and a scientist want to be. I am indebted to him till my last breath.

I would like to acknowledge my gratitude to Dr. Amod Kumar, my dissertation guide and Head of the Bio-Medical Instrumentation Unit. Above all and the most needed, he provided me unflinching encouragement and support in various ways. I’m ever grateful to him for helping me take a right decision of my professional career. As a guide his enthusiastic attitude inspired me a lot. The work culture that has been nurtured by him during the course is worth noticing, which help me in building up my working attitude. The freedom that he has provided me in carrying out my research work helped in developing the confidence for an independent researcher.

I pay my sincere thanks and gratitude to Dr Pawan Kapur, Director CSIO, for his inspiring advice, supervision and sowing a new work culture in CSIO with more freedom and innovation. This work would not have been possible without your support.
Acknowledgements

I take this opportunity to thank Mr. Dinesh Pankaj, Senior Scientist, Biomedical Instrumentation Unit for his truly scientific intuition has made him as a constant oasis of ideas and passions in science, which exceptionally inspired and enriches my growth as a student and researcher. I also want to thank Mr. Sanjeev Soni and Davinder Pal Singh for their valuable suggestions and support during the dissertation work.

With all love and affection, I want to thanks my parents; wife Shubhangi and my son Siddesh deserve special mention for their inseparable support and prayers. Thanks for your constant encouragement and giving me all support and fulfilling my desires.
