ACKNOWLEDGEMENT

First and foremost I would like to thank THE BEAUTIFUL NATURE, the GOD who really provided me good health, and lot of inspiration to survive. It would not have been possible to write this doctoral thesis without the help and support of the kind people around me, to only some of whom it is possible to give particular mention here.

The reported doctoral research on study of **Characterization of nanocarbon thin films** could not have been reached this level without my supervisors. My principle supervisor (guide) Prof. Dr. B.S.Satyanaryana, Principal, RVCE, Bangalore, has given me an opportunity to complete this thesis with continuous support. I thank my supervisor for the various nanocarbon samples provided for the study. My heartfelt thanks to my co-supervisor (co-guide) Prof. Dr.U. C. Niranjan, Director (Research & Training) and adjunct professor department E&C, for really supporting me in various difficulty stages, with continuous encouragement and kind supports. I am really grateful to my supervisors, for their kind guidance, support, advices and the fruitful discussions throughout the research.

I am grateful to our honourable Chancellor, Padmabhushan Dr. Ramdas Pai, for providing me an opportunity to carry out research work in our esteemed Manipal University. I would like to express my sincere gratitude to Dr. Vinod V. Thomas, Director, Manipal Institute of Technology (MIT). I would like to acknowledge Dr. Raviraj Adhikari, Associate Director (R&C), Prof. Dr. Ramesh R Galigekere, HOD, Department of Biomedical engineering; Prof. Dr. Umesh, NITK; Prof. Dr. VHS Moorthy, MIT; Prof. Dr. Kumara Shama, and Prof. Dr. Jyothi laksmi, for the fruitful recommendations and the supports.

Most of the results described in this thesis would not have been obtained without a close collaboration with few laboratories. It gives me immense pleasure to thank Dr. O. S. Panwar, Scientist G & Head, Plasma Processed Materials Group, National Physical Laboratory, Plasma Lab, NPL, New Delhi, for granting me the permission to work on cathodic arc facilities (to grow nanocarbon samples), conductivity measurement facility and the Raman facility. I thank Dr. Santhosh, and Mr. Ajeeth Patel, Centre for Atomic & Molecular Physics, Manipal University, for the software support PLS PLUS/IQ. Also thank for the support from Prof. Dr. Sathish Rao, Life Science Lab, Manipal University, for the support on toxicity study of nanocarbons. I acknowledge here the various LAB facilities of following institutes: Manipal Institute of Technology (MIT), Manipal University (conductivity, PVD, Field emission measurement setup, AFM), R.V.College Engineering, Bangalore (SEM facilities).
I would like thank the support from my various colleagues for their encouragements and good company throughout the research period. The supports of the associated departments (Biomedical engineering, Electronics & Communication), MIT, Manipal University are enormous. At this occasion I thank Mr. Shounak De for his company during the conductivity measurements.

The national and international conference funding facilities, extended to me to represent my research papers at different places such as Singapore, Delhi, Bangalore, and Manipal, are really encouraged and not forgettable. I acknowledge here all Manipal University officials who helped me directly or indirectly, during this process of Doctoral research.

Last but not least, I would like to pay high and warm regards to my wife Swathi, my son Abhijay, my relatives and my friends, for their continuous encouragement and patience, which helped me to complete my thesis.
