CONTENTS

CHAPTER PACK

1.0 General Introduction and Review of literature 2-7

2.0 Methodology and Formulae 8-26
  2.1 Reliability Attributes (formulae)
  2.2 Study of new theory of fuzzy logic Transformations of parameters

3.0 Nuclear Environmental Pollution and Pollution Hazard studies with reference to Dielectric Materials. 27-42
  3.1 Electricity, Nuclear power and the Global environment
  3.2 Simulation of physical parameters of dielectric Nuclear pollution using fuzzy logic system in the open environment.
  3.3 Reliability Investigation of Alloys using fuzzy logic and formation of new Alloys using Mass law of Mixing - A Nuclear Plant Material.

4.0 Reliability Attributes of Nuclear power Plant performance 43-61
  4.1 Reliability Evaluation of generating system using fuzzy logic
  4.2 Security analysis of Nuclear power plant using fuzzy logic methods
  4.3 Adequacy of Nuclear power system and analysis of fuzzy methods to improve it

5.0 Reliability Attributes of Major Nuclear power Plant components 62-87
  5.1 Reliability attributes of Indian Reactors
  5.2 Reliability attributes of Transformer using fuzzy logic under transient conditions.
  5.3 Reliability Attributes of synchronous generator under fault transient using fuzzy logic Networks.
  5.4 Fuzzy logic deadbeat controller (For improving reliability of Nuclear plant)

6.0 Neuro-fuzzy systems and reliability attributes Investigation of Nuclear power plants. 88-100
  6.1 Reliability attributes of Neural controlling networks using fuzzy logic and error detection during training considering Nuclear plants.

7.0 Failures of Tarapore, Narora Kalapakkam, Maha Rana Pratap Sagar and Kakrapar Nuclear Power Plants. 101-108

8.0 Discussion 109-114

9.0 Results presentation and Suggestions 115-118

10.0 References 119-123

Acceptance letters for publication
