OBJECTIVES
OBJECTIVES

Following were the objective for present studies:

1. Collection of representative clinical specimen from selected patients.

2. Microbiological processing of clinical specimen for isolation and characterisation of species under *Enterobacter cloacae*.

3. Antibiogram of isolates of species *Enterobacter cloacae*.

4. Evaluation of genus *Enterobacter* as human pathogen particularly in nosocomial infection.

5. Collection of water from various source, like: Ponds, Wells and Taps, taking appropriate precautions, following standard methods.

6. Isolation of members of genus *Enterobacter* from submitted water samples.
