ACKNOWLEDGEMENT

Today, first and foremost, I offer my heartiest gratefulness to GOD for providing all the strength and determination to stride ahead in course of life and never deter away from the unfortunate events of life.

I express thanks from the core of my soul to my supervisor **Dr. Netra Pal Singh** (Senior Lecturer, Meerut College, Meerut, U.P., India) for his excellent guidance, constant encouragement and cooperation during the course of this work. He put all his efforts to nurture me scientifically as well as professionally. He incorporated a sense of independency in me and gave valuable suggestions, time and resources for my personal development. He ingrained confidence and an urge to do things, no matter how complicated it appeared. Under his guidance I am now able and can move forward in my life. It is indeed due to his efforts also that I would have been able to accomplish this work.

I express my profound and gratitude to **Dr. Jagvir Singh** (Assistant professor, Shri Jagdish Prasad Jhabarmal Tibrewala University, Vidyanagari, Jhunjhunu, Rajasthan) for his immerse help. Without his valuable and scientific suggestions it would have been impossible to finish this assignment.

I convey my deep regards and gratefulness to **Mr. Mordhwaj** (Technical Assistant, ACBR-Delhi University, India) for their providing instrumentation facilities to pursue the rational science.

In the last, I am also very thankful from the core of my heart to my loving family for their moral and financial support. Every member of my family encouraged me for scientific suggestions. I am grateful to my father for their utmost cooperation, selfless help and endless moral support during my research work.

**Mr. Pradeep Kumar**
