Acknowledgement

The most beautiful thing we can experience is the mysterious. It is the source of all true art and science.

Albert Einstein

There is no task more obligatory than the repayment of kindness. So I would like to acknowledge those spirits here, who stood with me with patience and gentleness during all these years while constructing the shape and content of this voluminous work. The things were difficult but not impossible, as the holy blessing was and is always with me.

I got one of the best supervisor of the university, Prof. Tarlok singh Banipal, who with his optimistic, calm and problem solving attitude agreed to sail through invisible oceans of science and thought and I am grateful that he kept his promise so that the present form of the thesis came into existence. The attributes of his personality get engraved on our hearts and will shine throughout as his token of love.

I am indebted deeply to Dr. Parampaul Kaur Banipal, Associate Professor, Department of Chemistry, Guru Nanak Dev University for her care, encouragement, discussions and invaluable suggestions during my research and thesis writing. She was always there with back up of lot of energy during tough time and I will miss this greatly.

I am thankful to Prof. B. S. Randhawa, Head, Department of Chemistry, Guru Nanak Dev University for his cheering attitude and constant help time to time. I would also like to thank the former Heads, Department of Applied Chemistry and other teaching faculty of the department of chemistry for their supportive approach.

I am really blessed that I got seniors Dr. Gagandeep Singh, Dr. Kultar Singh, who set such beautiful traditions and cordial atmosphere in the lab that hard experimental work and discussion of results became enjoyable thing. They assured all the support during research and are always present there to solve the tough puzzles of life as well. My sincere thanks go to my labmates Er. A. K Sood, Dr. Jasbir Kaur, Dr. Vickramjit Singh. This was the company, I had started enjoying the work and it really came to blossom. I am also thankful to my juniors Ms. Harjinder Kaur, Mrs. Navalpreet Kaur, Ms. Neha Aggarwal and Ms. Sonika Thakur as I became some time hard in order to
preserve the atmosphere of lab but they were there for co-operation. I wish to extend my thanks to my friends and seniors Dr. Tilak Raj, Dr. Ashish Kapoor, Dr. Gurpinder Singh for their constant encouragement and invaluable suggestions.

I am thankful to laboratory staff of the Department who catered the required facilities to boost the research work.

Everyone has its own refuge, where one can shed one’s worries, sorrows and failures in replacement of new ideas, energy and spirit, where one feels most comfortable. I am fortunate that I got this from my friends from Naad Pargass, Sri Amritsar. Whenever I got exhausted while walking on the droughtful ways of thought, I got new spirit and energy from this safe haven of mine.

The journey to Doctorate degree was full of excitement, failure, hope and success. I have experienced and enjoyed many sweet, bitter, hard, beautiful moments during these years. I got married with Rupinderjit Kaur and now have a daughter Japnidh Kaur. They have become the most beautiful part of my voyage, thanks to almighty.

In the last I would like to express my gratitude and deepest love to my parents and other family members, who have provided all kind of support and love during my educations and waited patiently for its completion. It will be impossible for me remove the debt of faith they have shown in me.

Harpreet Singh
