Fig. 2.2C: UV-DRS pattern of a) CaTiO$_3$, b) PbTiO$_3$, and c) ZnTiO$_3$ 75

Fig. 2.3C: XRD pattern of a) CaTiO$_3$, b) PbTiO$_3$, and c) ZnTiO$_3$ 76

Fig. 2.4C: SEM images of a) CaTiO$_3$, b) PbTiO$_3$, and c) ZnTiO$_3$ 79

Fig. 2.5C: TG-DTA of a) CaTiO$_3$, b) PbTiO$_3$, and c) ZnTiO$_3$ 81

Fig. 2.6C: a) I-V Characteristic of CTiO$_3$, and b) electrical conductivity of CTiO$_3$ 84

Fig. 3.1: Chemical structure of Mauve 85

Fig. 3.2: Principle of cotton dyeing with triazyl reactive dye 88

Fig. 3.3: Photocatalytic degradation of MB dye in presence of a) MgGeO$_3$, b) CaGeO$_3$, c) without catalyst, and d) in dark as a function of time. 98

Fig. 3.4: Percent degradation with concentration of MB dye using a) MgGeO$_3$, and b) CaGeO$_3$. 98

Fig. 3.5: Effect of amount of photocatalyst on photodegradation of MB dye using a) CaGeO$_3$, and b) MgGeO$_3$. 100

Fig. 3.6: Change in absorbance with time, representing the photodegradation of MB using MgGeO$_3$. 100

Fig. 3.7: Photocatalytic degradation of MB dye using a) ZnSeO$_3$, b) MgSeO$_3$, c) PbSeO$_3$, d) CuSeO$_3$, e) without catalyst, f) in dark and a’) photodegradation of IC dye using ZnSeO$_3$. 103

Fig. 3.8: Photodegradation of MB and IC dye at various concentrations using ZnSeO$_3$ photocatalyst. 103

Fig. 3.9: Effect of amount of ZnSeO$_3$ photocatalyst on photodegradation using MB and IC. 105

Fig. 3.10: Change in absorbance with time, representing the photodegradation of IC using ZnSeO$_3$. 105

Fig. 3.11: Graphical representation of photodegradation of MB dye using a) ZnTiO$_3$, b) PbTiO$_3$, c) CaTiO$_3$, d) without catalyst, and e) in dark. 108

Fig. 3.12: Effect of MB dye concentration on photodegradation using a) ZnTiO$_3$. vi
b) PbTiO$_3$, and c) CaTiO$_3$

**Fig. 3.13:** Effect of amount of photocatalyst on photodegradation using a) ZnTiO$_3$, b) PbTiO$_3$, and c) CaTiO$_3$

**Fig. 3.14:** Change in absorbance with time, representing the photodegradation of MB using ZnTiO$_3$

**Fig. 3.15:** Methylene blue degradation under sunlight in presence of ZnTiO$_3$
   a) before irradiation, b) after irradiation, and c) colour removal during photocatalysis.

**Fig. 3.16:** Photodegradation pathway of methylene blue in presence of ZnTiO$_3$

**Fig. 3.17:** Mass spectrum at wavelength 284 nm
   I) first stage before irradiation,
   II) second stage after irradiation, and
   III) third stage at final stage

**Fig. 3.18:** Mass spectrum at wavelength 270 nm
   I) first stage before irradiation,
   II) second stage after irradiation, and
   III) third is final stage

**Fig. 3.19:** Mass spectrum at wavelength 256 nm
   I) first stage before irradiation,
   II) second stage after irradiation, and
   III) third is final stage

**Fig. 3.20:** Mass spectrum at wavelength 242 nm
   I) first stage before irradiation,
   II) second stage after irradiation, and
   III) third is final stage

**Fig. 4.1:** (i), (ii) and (iii) Microscopic observations of *E. coli*, *E. aerogenes* and *S. aureus* respectively

**Fig. 4.2:** (i) Spreading method using sterile swab, (ii) Application of standard antimicrobial discs.

**Fig. 4.3:** (i), (ii), (iii) and (iv) Activity of standard antimicrobial discs in first plate (clockwise direction) against *E. coli*, *E. aerogenes*, *P. aeruginosa* and *S. aureus* respectively and activity of Synthesized mixed metal oxides in second plate (clockwise direction) on *P. auroginosa*, *E. coli*, *E. aerogenes* and *S. aureus* respectively

**Fig. 4.4:** Activity of AGeO$_3$, BSeO$_3$ and CTiO$_3$ on ATCC strains on microorganisms

**Fig. 4.5:** Effects of laboratory synthesized mixed metal oxide on microbial biodiversity
**Fig. 4.6:** Effect on plumule and radical length of *wheat seeds* in presence of
i) Sterile distilled water, ii) Methylene blue and iii) photo degraded Methylene blue decolorized using mixed metal oxide of ABO$_3$

**Fig 4.7:** Effects of mechanochemical synthesized mixed metal oxides on plant system (*Allium cepa* root tips).

**Fig.4.8:** Effects of mixed metal oxide on plant systems (*Allium cepa* roots)
(i) : Onion bulls were exposed to test samples, (ii) and (iii) : Onion bulbs exposed to mixed metal oxide samples, (iv), (v) and (vi) : Cells were observed under microscope

**Fig.4.9:** Effect of laboratory Synthesized mixed metal oxides on plant system (*Hibiscus* pollen tube germination).

**Fig.4.10:** (i): Petri plate containing pollen grains in nutrient medium with controls and test sample,(ii) : Negative control i.e. pollen grains without nutrient medium didn’t shows pollen tube germination,
(iii) : Positive control i.e. pollen grains without test samples shows pollen tube germination, (iv) and (v) : Pollen grains with test samples shows pollen tube germination.

**Fig.4.11:** (i) : Negative control, (ii) : Pollen tube germination after 1 hour incubation,(iii,) (iv) and (v) Pollen grains with test samples shows pollen tube germination.

**Fig.5.1:** Various classes of heterogeneous catalysts employed industrially

**Fig.5.2:** Structures showing of different types of zeolites

**Fig.5.3:** a) Chromatogram and b) Mass spectrum of benzene

**Fig.5.4:** a) Chromatogram and b) Mass spectrum of Toluene

**Fig.5.5:** a) Chromatogram and b) Mass spectrum of benzyl chloride

**Fig.5.6:** a) Chromatogram and b) Mass spectrum of diphenylmethane

**Fig.5.7:** a) Chromatogram and b) Mass spectrum of o-diphenylmethane and c) Mass spectrum of p-diphenylmethane
