Acknowledgement

I would first like to thank my teacher and supervisor Professor Swapan Raha, Department of Mathematics, Visva-Bharati for his patient and help in overcoming my difficulties.

I am grateful to my teachers in the Department of Mathematics, Visva-Bharati for their constant support in preparation of this thesis. The Head of the Department of Mathematics, Prof. Puspajit Mandal has always been encouraging.

Dr. Sujata Ghosh, formerly lecturer in the Department of Mathematics, Visva-Bharati and later postdoctoral researcher, Department of Artificial Intelligence, University of Gröningen, The Netherlands helped my comprehension of problems related to my research. Dr. Arani Chakraborty, Associate Professor of the Department of Physics, Visva-Bharati supported me in learning the Linux operating system. Dr. Bipasha Raha, Associate Professor in the Department of History, Visva-Bharati inspired me to complete my work on time. I gratefully acknowledge their efforts.

I would also like to acknowledge the technical support provided by Prof. Janós C. Fodor, Department of Computer Science, Eötvös Loránd University, Budapest 112, Hungary in preparing the thesis. Thanks are also due to the anonymous referees for their valuable comments and suggestions for subsequent modification of some of my research works.

Non-academic staff members in the Department of Mathematics, Visva-Bharati are the constant source of help. Sri Tulsi Charan Ghosh has been my source of strength as I struggled to finish this work. The research group of Prof. S. Raha in Visva-Bharati have contributed immensely to my personal and professional well-being. The group has been a source of friendship as well as good advice and collaboration. I am especially grateful to Himadrishekhar Gupta, Asim Pal, Sudin Mandal and Namrata Bhattacharya. I would like to acknowledge the support of Dr. Abul Hossian and Dr. Dipankar Mazumdar. We worked together (along with Dipankar and Asim) on the comparison of similarity-based reasoning with other existing methods experimentally, and I appreciate their enthusiasm, intensity, willingness to do frequent computer graphics, and amazing ability to manipulate data.

This research work has been partially supported by the UGC SAP (DRS) Phase-II project under the Department of Mathematics, Visva-Bharati. I acknowledge with thanks meeting financial assistance.

I am thankful to my mother for her constant inspiration and support. My family members and relatives deserve special thanks for their help and support throughout the completion of this thesis. My brother-in-law Dr. Saikat Shovan Deb, Lecturer, School of Accounting Economics and Finance, Deakin University, Melbourne, Australia, who persuaded, inspired and encouraged me from time to
time to complete this work. I thank my little daughter Anchal for reminding me that research cannot be joyful, without the simple pleasure of life.

Finally, I would like to thank my wife Manasi for her co-operation and patience, without which this work could not have attained the present shape.
