<tbody>
<tr>
<td>1. Association between adjustment problems and life-satisfaction</td>
<td>43</td>
</tr>
<tr>
<td>2. Association between adjustment problems and insecurity feelings</td>
<td>44</td>
</tr>
<tr>
<td>3. Association between life-satisfaction and insecurity feelings</td>
<td>45</td>
</tr>
<tr>
<td>4. Correlation matrix of adjustment problems in various areas life-satisfaction and insecurity feeling</td>
<td>46</td>
</tr>
<tr>
<td>5. Association between mental health indicators and socio-economic variables including religious attitude</td>
<td>48</td>
</tr>
<tr>
<td>6. The mean standard deviation and standard error for adjustment problems insecurity feeling and attitude towards religion among the well moderately and poorly satisfied in life</td>
<td>50</td>
</tr>
<tr>
<td>7. Anova to test the significance of difference in means for the scores in health adjustment problems among the well moderately and poorly satisfied in life</td>
<td>51</td>
</tr>
<tr>
<td>8. Critical ratio to compare the mean scores in health adjustment problems among well moderately and poorly satisfied in life</td>
<td>52</td>
</tr>
<tr>
<td>9. Anova to test the significance of difference in means for the scores in emotional adjustment problems among the well moderately and poorly satisfied in life</td>
<td>53</td>
</tr>
<tr>
<td>10. Critical ratio to compare the mean scores in emotional adjustment problems among well moderately and poorly satisfied in life</td>
<td>54</td>
</tr>
</tbody>
</table>
11. Anova to test the significance of difference in means for the scores in self adjustment problems among the well moderately and poorly satisfied in life

12. Critical ratio to compare the mean scores in self adjustment problems among well moderately and poorly satisfied in life

13. Anova to test the significance of difference in means for the scores in home adjustment problems among the well moderately and poorly satisfied in life

14. Critical ratio to compare the means of scores in home adjustment problems among well moderately and poorly satisfied in life

15. Anova to test the significance of difference in means for the scores in social adjustment problems among the well moderately and poorly satisfied in life

16. Critical ratio to compare the mean scores in social adjustment problems among well moderately and poorly satisfied in life

17. Anova to test the significance of difference in means for the scores in overall adjustment problems among the well moderately and poorly satisfied in life

18. Critical ratio to compare the mean scores in overall adjustment problems among well moderately and poorly satisfied in life

19. The mean standard deviation and standard error for adjustment problems life-satisfaction and attitude towards religion among less insecured moderately insecured and more insecured respondents
20. Anova to test the significance of difference in means for the scores in health adjustment problems among less insecure, moderately insecure, and more insecure respondents.

21. Critical ratio to compare the mean scores in health adjustment problems among less insecure, moderately insecure, and more insecure respondents.

22. Anova to test the significance of difference in means for the scores in emotional adjustment problems among less insecure, moderately insecure, and more insecure respondents.

23. Critical ratio to compare the mean scores in emotional adjustment problems among less insecure, moderately insecure, and more insecure respondents.

24. Anova to test the significance of difference in means for the scores in self adjustment problems among less insecure, moderately insecure, and more insecure respondents.

25. Critical ratio to compare the mean scores in self adjustment problems among less insecure, moderately insecure, and more insecure respondents.

26. Anova to test the significance of difference in means for the scores in home adjustment problems among less insecure, moderately insecure, and more insecure respondents.

27. Critical ratio to compare the mean scores in home adjustment problems among less insecure, moderately insecure, and more insecure respondents.

28. Anova to test the significance of difference in means for the scores in social adjustment problems among less insecure, moderately insecure, and more insecure respondents.
29. Critical ratio to compare the mean scores in social adjustment problems among less insecure, moderately insecure and more insecure respondents.

30. Anova to test the significance of difference in means for the scores in overall adjustment problems among less insecure, moderately insecure and more insecure respondents.

31. Critical ratio to compare the mean scores in overall adjustment problems among less insecure, moderately insecure and more insecure respondents.

32. Distribution of the respondents by age.

33. Critical ratio in adjustment problems life-satisfaction insecurity feeling and religious attitude among respondents age group.

34. Distribution of the respondents by sex.

35. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among two group.

36. Distribution of the respondents by community.

37. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among respondents community.

38. Distribution of the respondents by religion.

39. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among two religious groups.

40. Distribution of the respondents by marital status.

41. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among married and unmarried respondents.
42. Distribution of the respondents by nativity

43. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among two groups

44. Distribution of respondents by experience as a teacher

45. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among respondents experience as teacher

46. Distribution of respondents by experience as a headmaster

47. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among respondents experience as headmaster

48. Distribution of the respondents by type of family

49. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among joint family and nuclear family of respondents

50. Distribution of the respondents by family size

51. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among the two groups

52. Distribution of the respondents with and without sons

53. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among the two groups

54. Distribution of the respondents with and without daughters
55. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among two groups

56. Distribution of the respondents in school management

57. Critical ratio in adjustment problems life-satisfaction insecurity feeling and attitude towards religion among the two groups
