List of Tables..............................................................................................................v

List of Abbreviations..................................................................................................vi

Abstract......................................................................................................................vii

Chapter 1 Introduction..............................................................................................1

1.1 Software Engineering..........................................................................................1
1.2 Software Engineering Goals And Practices
1.3 Software Process
1.4 Software Process Modeling
    1.4.1 Advantages Of Implementing Software Engineering Process Models….
1.5 Thesis Overview

Chapter 2 Evaluating Software Process Models

2.1 Evaluation Process
    2.1.1 Quality Requirement Definition
    2.1.2 Evaluation Preparation
    2.1.3 Evaluation Procedure
2.2 Existing Evaluation Methods Of Software Process Models
    2.2.1 Methods For Model Definition
    2.2.2 Definition Of Measurements Or Metrics
    2.2.3 Methods For Data Capture
    2.2.4 Methods For Analysis
    2.2.5 Managing Validity Treats
2.2.6 Research Methods Designed For Objective Evaluation

2.3 Solving A Model
   2.3.1 Analytical methods
   2.3.2 Computer based simulation

**Chapter 3 Process Model Development**

3.1 Approaches For Software Process Models
3.2 Model Development And The Execution Process
   3.2.1 Modeling Activities And Intermediate Products
   3.2.2 Waterfall Processes
   3.2.3 V-Type Processes
   3.2.4 Iterative And Incremental Processes
   3.2.5 Spiral Processes
   3.2.6 Agile Processes
   3.2.7 Code And Fix Processes
3.3 Design Considerations
3.4 Software Design Description

**Chapter 4 Related Work**

4.1 Need For GSPM (Generalized Software Process Model)
4.2 General Model For Software Process
   4.2.1 Study And Comparison Of Process Models To Ensure Need For Obtaining A Generalized Model
4.3 Software Life Cycle Models
   4.3.1 Waterfall Model
      4.3.1.1 Where To Use The Waterfall Model
   4.3.2 Incremental Model Or Iterative Enhancement Model
      4.3.2.1 Where To Use The Incremental Model
   4.3.3 RAD Model
4.3.3.1 Where To Use The RAD Model

4.3.4 Prototyping Model

4.3.4.1 Where To Use The Prototyping Model

4.3.5 Spiral Model

4.3.5.1 Where To Use The Spiral Model

4.4 Comparison Table Of The Traditional Models

4.5 Shortcomings Of Various Software Development Models

4.6 Efficient Paradigm For Implementation Of Process Models In Projects

4.6.1 Model For Flexible Requirements

4.6.1.1 Implementation Of Proposed Model For Projects With Flexible Requirements In Courseware Development

4.6.2 Model For Dynamic And Collaborative Projects

4.6.2.1 Evaluation To Produce An Efficient Paradigm For Dynamic And Collaborative Projects

Chapter 5 Generalized Software Process Model - GSPM
An Approach For General Process

5.1 Generalized Software Process Model

5.2 Basic Structural Model For GSPM

5.3 Data Flow Diagram For A Generalized Process Model

5.4 Internal Structure Of A Generalized Software Process Model

5.5 Case Study

5.5.1 E-Governance Projects

5.5.1.1 Benefits derived using GSPM (Generalized Software Process Model)

5.5.2 Student Information System Using Spiral Model

5.5.3 Student Information System Using GSPM (Generalized Software Process Model)
Chapter 6 Petri Net And Graphical Analysis Of GSPM
(Generalized Software Process Model)

6.1 Model Development And Execution Process Of GSPM
6.2 Petri Nets
6.3 Results And Conclusions
   6.3.1. Results
   6.3.2 Limitations
   6.3.3 Conclusions and Future Work

Appendix A Publications / Books
