# LIST OF TABLES

## TABLES

1a. Experimental conditions for batch mode adsorption, desorption, kinetic studies in aqueous solutions

1b. Experimental conditions for batch mode adsorption, desorption, kinetic studies in aqueous solutions

2. Experimental conditions for synthetic wastewater treatment studies

3. Characteristics of coir pith carbon

4. Surface functional groups

5. Effect of agitation time and initial dye concentration on adsorption of Congo Red

6. Effect of agitation time and initial dye concentration on adsorption of Methylene Blue

7. Effect of agitation time and initial dye concentration on adsorption of Acid Brilliant Blue

8. Effect of agitation time and initial dye concentration on adsorption of Procion Orange

9. Effect of agitation time and initial phenol concentration on adsorption of Phenol

10. Effect of agitation time and initial chlorophenol concentration on adsorption of 2-Chlorophenol

11. Effect of agitation time and initial chlorophenol concentration on adsorption of 2,4-Dichlorophenol

12. Effect of agitation time and initial chlorophenol concentration on adsorption of 2,4,6-Trichlorophenol

13. Effect of agitation time and initial chlorophenol concentration on adsorption of Pentachlorophenol

14. Equilibrium times for the adsorbates for different concentrations

15. Data for second order kinetic plots for different dye concentrations

16. Data for second order kinetic plots for different phenol concentrations

17. Comparison of the first and second order adsorption rate constants for different dye concentrations
18. Comparison of the first and second order adsorption rate constants for different phenol concentrations
19. Effect of adsorbent dose on initial dye concentration
20. Effect of adsorbent dose on initial phenol concentration
21. Effect of adsorbent dose on final pH for different dye concentrations
22. Effect of adsorbent dose on final pH for different phenol concentrations
23. Data for Langmuir plots for adsorption of dyes
24. Data for Langmuir plots for adsorption of phenols
25. Data for Freundlich plots for adsorption of dyes
26. Data for Freundlich plots for adsorption of phenols
27. Langmuir constants
28. Equilibrium parameter \( (R_L) \)
29. Freundlich constants
30. Langmuir and Freundlich constants for adsorption of dyes by various adsorbents reported in literature
31. Langmuir and Freundlich constants for adsorption of phenols by various adsorbents reported in literature
32. Effect of agitation time and temperature on adsorption of Congo Red
33. Effect of agitation time and temperature on adsorption of Methylene Blue
34. Effect of agitation time and temperature on adsorption of Acid Brilliant Blue
35. Effect of agitation time and temperature on adsorption of Procion Orange
36. Effect of agitation time and temperature on adsorption of Phenol
37. Effect of agitation time and temperature on adsorption of 2-Chlorophenol
38. Effect of agitation time and temperature on adsorption of 2,4-Dichlorophenol
39. Effect of agitation time and temperature on adsorption of 2,4,6-Trichlorophenol
40. Effect of agitation time and temperature on adsorption of Pentachlorophenol
41. Equilibrium times for the adsorbates for different temperatures
42. Data for second-order kinetics for adsorption of dyes at different temperatures
43. Data for second order kinetics for adsorption of phenols at different temperatures
44. Comparison of the first and second order adsorption rate constant for dye at different temperatures
45. Comparison of the first and second order adsorption rate constants for phenols at different temperatures
46. Thermodynamical parameters
47. Pore diffusion coefficients for the removal of dyes
48. Pore diffusion coefficients for the removal of phenols
49. Effect of pH on the adsorption of Congo Red and Methylene Blue
50. Effect of pH on the adsorption of Acid Brilliant Blue and Procion Orange
51. Effect of pH on the adsorption of Phenol, 2-Chlorophenol and 2,4-Dichlorophenol
52. Effect of pH on the adsorption of 2,4,6-Trichlorophenol and Pentachlorophenol
53. Effect of final pH on per cent ionization for phenols
54. Desorption studies for dyes
55. Desorption studies for phenols
56. Composition of dye-containing synthetic wastewater
57. Composition of phenol-containing synthetic wastewater
58. Effect of adsorbent dose and initial dye concentration on removal of dyes from synthetic wastewater
59. Effect of adsorbent dose and initial phenol concentration on removal of phenol from synthetic wastewater
60. Data for Freundlich plots for adsorption of dyes from synthetic wastewaters
61. Data for Freundlich plots for adsorption of phenols from synthetic wastewaters
62. Freundlich constants for adsorption of dyes and phenols for synthetic wastewaters
63. Effect of pH on the adsorption of Congo Red and Methylene Blue from synthetic wastewater
64. Effect of pH on the adsorption of Acid Brilliant Blue and Procion Orange
65. Effect of pH on the adsorption of Phenol, 2-Chlorophenol and 2,4-Dichlorophenol from synthetic wastewater
66. Effect of pH on the adsorption of 2,4,6-Trichlorophenol and Pentachlorophenol from synthetic wastewater
