# CONTENTS

## PART – I

### CHAPTER I

**GENERAL INTRODUCTION**

1. Composition of wood .......................... 1
2. Historical outline ............................ 7
3. Chemical constitution of lignin .......... 12
4. Role of lignin in the biosphere .......... 15
5. Biosynthesis of lignin ......................... 23

### CHAPTER II

**REVIEW OF THE LITERATURE**

1. Isolation and characterization of lignin 27
2. Biodegradation of lignin ....................... 46
3. Musa species ................................. 53

### CHAPTER - HI

**OBJECTIVES AND SCOPE OF THE PRESENT WORK**

### CHAPTER - IV

**PRESENT WORK**

## PART – II

### CHAPTER - I

**ISOLATION OF DIOXANE LIGNIN**

1. A comparison of the methods available 61
2. Isolation of lignin from pseudostem core and sheath 63
3. Discussion .................................. 72
CHAPTER – II
CHEMICAL METHODS OF DEGRADATION OF LIGNIN

1. Permanganate oxidation of core and sheath dioxane lignin
2. Alkaline nitrobenzene oxidation of core and sheath dioxane lignin
3. Chloramine-T oxidation of core and sheath dioxane lignin

CHAPTER – III
PHYSICO CHEMICAL METHODS OF ANALYSIS

1. Elemental analysis of isolated lignin from core and sheath
2. Ultraviolet spectroscopic analysis of isolated lignin from core and sheath
3. Fourier transform infrared spectroscopic analysis of isolated lignin from core and sheath
4. $^{13}$C nuclear magnetic resonance spectroscopic analysis of isolated lignin from core and sheath
5. $^1$H nuclear magnetic resonance spectroscopic analysis of isolated lignin from core and sheath
6. Determination of molecular weight of isolated lignin from core and sheath by size exclusion chromatography

CHAPTER – IV
BIODEGRADATION OF ISOLATED DIOXANE LIGNIN

CHAPTER – V
CONCLUSION

BIBLIOGRAPHY
