CONTENTS

1. INTRODUCTION
   1.1 Economic management 5
   1.2 Need of statistics and economics disciplines 6
   1.3 Importance of research topics 9
   1.4 Importance of Linear programming 11
   1.5 The diet problem 13
   1.6 Objectives of the study 14
   1.7 Organization of thesis 16

2. REVIEW OF LITERATURE 19

3. DATA REQUIREMENT AND PROCESSING OF THE DATA 44
   3.1 Source of data 44
   3.2 Location 45
   3.3 History of herd and breeding programme 45
   3.4 Housing and management 46
   3.5 Health management 47
   3.6 Feeding 47
   3.7 Specification of model 48
   3.8 Average milking animal units per day 58
   3.9 Feeds and fodders available 61
   3.10 Lactation length 66
3.11 Service period 67
3.12 Dry period 68
3.13 Lactation milk yield 68

4. RESEARCH METHODOLOGY 70
4.1 Introduction 70
4.2 A scientific approach 70
4.3 Phases of operations research 72
4.4 Assumptions in linear programming model 73
4.5 The hypothesis 74
4.6 Logic of the constraints and objective function 74
4.7 Nutritional system 75
4.8 Formal linear programming model 79
4.9 Linear programming equations 84
4.10 Notations used 86
4.11 Constraints of the requirement of nutritional standards 87
4.12 Monthwise and seasonwise linear programming model 89
4.13 Productivity estimation 106

5. RESULTS AND DISCUSSION 111
5.1 Introduction 111
5.2 Conditions for linear programming model 112
5.3 Sensitivity analysis
5.4 Optimal feeding pattern
5.5 Income cost and productivity ratio estimates
5.6 Income
5.7 Total cost
5.8 Correlation coefficients of productive traits with income, cost and productive ratio
5.9 Testing of Hypothesis

6 SUMMARY AND CONCLUSIONS
6.1 Introduction
6.2 Limitations of the model
6.3 Findings of the study
6.4 Conclusions and policy implications
6.5 Scope for further research

7. BIBLIOGRAPHY

8. APPENDIX - I
