# List of Tables

3.1 Effect of variation in arm length \((a,b)\) and width \((w)\)  
3.2 Fractional bandwidth comparison  
3.3 Geometric parameters of the coupled bunch hairpin multiresonator  
3.4 Bandwidth, fractional bandwidth and \(Q\) at different resonances  
3.5 Measured transmission characteristics of bunch hairpin resonator on a substrate with \(\varepsilon_r\) 3.7  
3.6 Measured transmission characteristics of bunch hairpin resonator on a substrate with \(\varepsilon_r\) 4.3  
4.1 Geometric parameters of the Open stub multiresonators inside the modified transmission line  
4.2 Resonator length and corresponding frequency  
4.3 Parametric studies of relative permittivity of resonator medium and corresponding resonance  
4.4 Parametric studies of height variations of substrate  
4.5 Measured response of eight bit multiresonator  
4.6 Fractional bandwidth of Bunch coupled multiresonator and Open stub multiresonator in modified transmission line  
5.1 Geometric parameters of the shorted ring multiresonator  
5.2 Shorted loop multiresonator’s insertion loss and bandwidth at their resonant frequencies  
5.3 Comparison of fractional bandwidth
