ACKNOWLEDGEMENT

It would not have been possible to accomplish this task without the help and support of the kind people around me, to only some of whom it is possible to give particular mention here.

First and foremost I want to thank my advisor Prof. Beena Mathur. It has been an honour to work under her able guidance. She has taught me, both consciously and unconsciously, various facets of a good research. The joy and enthusiasm she has for research was contagious and motivational for me, even during tough times in the pursuit. I appreciate all her contributions of time, ideas and her unsurpassed knowledge to make my experience productive and stimulating.

I acknowledge the technical and other assistance provided to me by the office of the Superintendent of Police, Jhunjhunu (Rajasthan) along with the co-operation and participation of subjects.

I feel grateful to Prof. L. K. Maheshwari, the then Vice-Chancellor, Birla Institute of Science and Technology (BITS), Pilani (District Jhunjhunu) for facilitating the biochemical estimations necessary for the project.

Last but not the least, I would like to thank my family members. I realize the unconditional support of my husband, because of whom I got a closer insight into the lives of police personnel and the nature and demands of their job which motivated me to carry out research on them. My two boys were extremely helpful and expressed great patience at all times. The love of my parents provided my inspiration and was my driving force and my in-laws have given me their unequivocal support throughout, as always, for which my mere expression of thanks likewise does not suffice.

For any errors or inadequacies that may remain in this work, of course, the responsibility is entirely my own.

Parul Mittal
