Acknowledgments

First and foremost, I am grateful to Soumya for the love, care and support at all times. Without her patience, this thesis would have been impossible. I am indebted to the motivation and support of my parents and sister who stood by my side always.

I am thankful to Prof. S. G Kulkarni, my PhD supervisor for helping me develop this thesis. He has a rather uncanny skill of expressing thoughts in apt words. His imagination and sense of humor are unparalleled. I have really enjoyed listening to his thoughts in philosophy as well as in matters of everyday issues. I am indebted to him especially for the meticulous correction of my drafts and also for commenting on it. His stunning scholarship in several areas in philosophy, and particularly in the philosophy of Kuhn and Kant helped me shape my beliefs.

Prof. Prajit. K. Basu has always been a major influence in my days in Hyderabad starting from my MPhil in 2005. He was always on the ball; be it philosophy, teaching, discussion, advice or motivation. I thank him for commenting on my drafts and discussing with me on a variety of philosophical issues at various times. Prof. Basu is clinical in his philosophical pursuits, always looking for intricate details and flaws in arguments. I thank him especially for his professionalism and work ethic which have already left lasting influences on me.

I am grateful to Prof. Amitabha Dasgupta, Prof. R C Pradhan, Prof. Raghuramaraju, Dr K. S Prasad, Mr. Ananda Wazalvar, Dr. Ananda Sagar, Dr. Venusa Tinyi and Dr Kavita Chauhan for their help and support. I thank the department teaching fraternity for the motivation in terms of conducting activities in academic philosophy.

I am indebted to Prof. Nizar Ahmed for his constant encouragement. Without his influence and motivation, I would not have ended up here. I thank him especially for the wonderful discussions on various issues at his home in Kalady as well as in Calicut.

I thank Prof. Sayd A Sayeed for lending motivation and support at all times. I am indebted to Prof. Priyedarshi Jetli for the wonderful correspondence and for his efforts in going through my writings.
I thank Prof. Stathis Psillos for luring me into the scientific realism debate. I am grateful to Prof. Anjan Chakravartty for giving me the kick start in the debate back in 2007. Apart from these two, there are a bunch of thinkers who helped me shape this thesis. I thank them all. I am indebted above all to Prof. Uskali Maki and Jacob Busch for providing me valuable literature.

Philose and Prasanna, two superb friends without whom my days in Hyderabad would have been colorless. I have learned a lot from my discussions with Philose on various aspects. I thank both of them.

I am thankful to Robin for commenting on my thoughts and discussing philosophical issues with me often. I thank Jolly, especially for his help at the basket ball court. I am thankful to Ali Asghar for various helps. I thank Sreejith, Shinod, Alem, Roshan, Shinumol, Saneesh, Ajay, Sunkhanna, Ashok, Haribabu, Jayasree and all other friends in the department (apologies if I had missed any).

I am indebted to my friend, late Anandaroop Bhattacharya, whose incredible sense of humor made me forget all worries in those wonderful years of 2008 and 2009. I thank my friend Antony J Kuttencherry for being supportive at all times and in giving me constant motivation. I learned several things in life from my associations with Batta and Kuttencherry.

I thank Santosh Peter and Dhanesh Kumar for keeping in constant touch and supporting me always. Talking to them eases the difficulties in life and makes my mind free of concerns.

I thank all the office staff (past and current) of the philosophy department; Sattiah, Nagarani, Praveen, Swaroopa Rani, Prakash, Jyoti and Gayatri.

I thank the University of Hyderabad for giving me wonderful facilities to work on, especially the academic environment and infrastructure. I thank the University Grants Commission for funding my research for the past five years.

Sreekumar J
It is a pure impossibility to hit on the exact knowledge of some reality, even by chance, for a coincidence between thought and reality is a genuine epistemological monster!

Gaston Bachelard
