LIST OF TABLES

Table No. 1: Number of AM propagules per 100 g rhizosphere soil and percentage root colonization of Bt cotton from eight localities.

Table No. 2: Number of AM propagules per 100 g non-rhizosphere soil of Bt cotton from eight localities.

Table No. 3: Number of species of AM fungi isolated from rhizosphere soil of Bt cotton from eight localities.

Table No. 4: List of species of AM fungi isolated from rhizosphere of Bt cotton from eight localities.

Table No. 5: Study of physicochemical parameters of rhizosphere soil of Bt cotton from eight localities.

Table No. 6: Study of physicochemical parameters of non-rhizosphere soil of Bt cotton from eight localities.

Table No. 7: Effect of water stress on number of leaves of Bt cotton after 45, 90 and 135 days.

Table No. 8: Effect of water stress on length of shoot and root (cm) of Bt cotton after 45, 90 and 135 days.

Table No. 9: Effect of water stress on fresh weight of shoot and root (g) of Bt cotton after 45, 90 and 135 days.

Table No. 10: Effect of water stress on dry weight of shoot and root (g) of Bt cotton after 45, 90 and 135 days.

Table No. 11: Effect of water stress on percentage root colonization and number of propagules per 100 g of soil of Bt cotton after 45, 90 and 135 days.

Table No. 12: Effect of water stress on number of squares of Bt cotton after 45, 90 and 135 days.

Table No. 13: Effect of water stress on number of fruits of Bt cotton after 90 and 135 days.

Table No. 14: Effect of salt treatment on number of leaves of Bt cotton after 45 days.
Table No. 15: Effect of salt treatment on height of shoot of Bt cotton after 45 days.

Table No. 16: Effect of salt treatment on length of root of Bt cotton after 45 days.

Table No. 17: Effect of salt treatment on fresh weight of Bt cotton plants after 45 days.

Table No. 18: Effect of salt treatment on dry weight of Bt cotton after 45 days.

Table No. 19: Effect of salt treatment on mycorrhizal dependency of Bt cotton plants after 45 days.

Table No. 20: Effect of salt treatment on number of AM fungal propagules per 100 g soil and percentage root colonization in Bt cotton plants after 45 days.

Table No. 21: Effect of AM fungi on growth of Bt cotton plants in the field.

Table No. 22: Effect of AM fungi on plant growth vigour index and mycorrhizal dependency in the field.

Table No. 23: Effect of AM fungi on yield of Bt cotton plants in the field.

Table No. 24: Effect of AM fungi on average yield of bolls and seed cotton per plant in the field.

Table No. 25: Effect of Glomus species, Verticillium dahliae and two levels of soil phosphorus on height of Bt-cotton plant (cm).

Table No. 26: Effect of Glomus species, Verticillium dahliae and two levels of soil phosphorus on dry weight (g) of shoot and root of Bt-cotton plant.

Table No. 27: Effect of Glomus species, Verticillium dahliae and two levels of soil phosphorus on vascular discolouration index and propagules per gram of petiole tissue of Bt-cotton plant.

Table No. 28: Effect of Verticillium dahliae and soil phosphorus on percentage of root tissue infected with Glomus species in Bt-cotton.

Table No. 29: Effect of Glomus species, Verticillium dahliae and two levels of soil phosphorus on concentration of P (%), K (%) and Zn (ppm) in leaves of Bt cotton plants.
