LIST OF CHARTS

Chart No. 1: Number of AM propagules per 100 g rhizosphere soil of Bt cotton from eight localities

Chart No. 2: Percentage root colonization of Bt cotton from eight localities

Chart No. 3: Number of AM propagules per 100 g non-rhizosphere soil of Bt cotton from eight localities

Chart No. 4: Number of species of AM fungi isolated from rhizosphere soil of Bt cotton from eight localities

Chart No. 5: Effect of water stress on Number of Leaves of Bt cotton

Chart No. 6: Effect of water stress on length of shoot and root (cm) of Bt cotton after 45, 90 and 135 days

Chart No. 7: Effect of water stress on fresh and dry biomass of shoot (g) of Bt cotton after 45, 90 and 135 days

Chart No. 8: Effect of water stress on fresh and dry biomass of root (g) of Bt cotton after 45, 90 and 135 days

Chart No. 9: Effect of water stress on number of propagules per 100 g of soil of Bt cotton after 45, 90 and 135 days

Chart No. 10: Effect of water stress on percentage root colonization of soil of Bt cotton after 45, 90 and 135 days

Chart No. 11: Effect of water stress on number of squares of Bt cotton

Chart No. 12: Effect of water stress on number of fruits of Bt cotton

Chart No. 13: Effect of salt treatment on number of leaves of Bt cotton plants after 45 days

Chart No. 14: Effect of salt treatment on height of shoot of Bt cotton plants after 45 days

Chart No. 15: Effect of salt treatment on length of root of Bt cotton plants after 45 days

Chart No. 16: Effect of salt treatment on fresh weight of Bt cotton plants after 45 days
Chart No. 17: Effect of salt treatment on dry weight of Bt cotton plants after 45 days

Chart No. 18: Effect of salt treatment on mycorrhizal dependency of Bt cotton plants after 45 days

Chart No. 19: Effect of salt treatment on number of AM propagules per 100 g soil in Bt cotton plants after 45 days

Chart No. 20: Effect of salt treatment on percentage root colonization in Bt cotton plants after 45 days

Chart No. 21: Effect of AM fungi on height and number of leaves of Bt cotton

Chart No. 22: Effect of AM fungi on number of branches, flowers and fruits of Bt cotton

Chart No. 23: Effect of AM fungi on plant growth vigour index of Bt cotton

Chart No. 24: Effect of AM fungi on mycorrhizal dependency of Bt cotton

Chart No. 25: Effect of AM fungi on yield of Bt cotton plants

Chart No. 26: Effect of AM fungi on average yield of bolls and seed cotton per plant

Chart No. 27: Effect of Glomus species, Verticillium dahliae and two levels of soil phosphorus on height of Bt-cotton plant (cm)

Chart No. 28: Effect of Glomus species, Verticillium dahliae and two levels of soil phosphorus on dry weight (g) of shoot and root of Bt-cotton plant

Chart No. 29: Effect of Verticillium dahliae and soil phosphorus on percentage of root tissue infected with Glomus species in Bt-cotton

Chart No. 30: Effect of Glomus species, Verticillium dahliae and two levels of soil phosphorus on concentration of P (%) and K (%) in leaves of Bt-cotton plants

Chart No. 31: Effect of Glomus species, Verticillium dahliae and two levels of soil phosphorus on concentration of Zn (ppm) in leaves of Bt-cotton plants
